

January 2025

Taltson Hydro Engagement List

### Wet Commissioning Activities at Taltson Hydro

Please be advised that as of January 12, 2025 Wet Commissioning at the Taltson Hydro Facility has begun with a small amount of water passing through the headgate into the spill way. Between now and the resumption of commercial operations on January 27, 2025 there will be a series of tests inside the powerhouse which may cause fluctuations in water levels directly downstream of the headgate to the confluence of the Taltson River and Trudel Creek (Figure 1).

Health, Safety, & Environment 4 Capital Drive, Hay River, NT X0E 1G2

Any changes in water levels could potentially lead to unsafe ice conditions in the affected areas which could make travel on the land dangerous. Accordingly, NTPC strongly advises land users to avoid these areas during this time and to exercise extreme caution if they do end up travelling on the land.

NTPC will be sending updates throughout the Wet Commissioning process to keep land users informed. If you do intend to be in the area, please contact System Control at 1-867-669-3370 to advise NTPC of your presence. Additionally, you can monitor water levels at the following link [https://wateroffice.ec.gc.ca/report/real\\_time\\_e.html?stn=07QD007](https://wateroffice.ec.gc.ca/report/real_time_e.html?stn=07QD007).

If you have any questions or concerns, please let me know.

Sincerely,

A handwritten signature in blue ink, appearing to read "Graeme Reid", is written over a light blue horizontal line.
