Dear Mr. Webb:

**Re: Land Use Permit Application and Water Licence Application – Incomplete  
Mining and Associated Activities – Discovery Lake, NT**

The Mackenzie Valley Land and Water Board (Board) received your application for a Water Licence (MV2020L2-0002) and a Land Use Permit (MV2020C0003) on May 1, 2020. Your water Licence application has been reviewed and found to be lacking sufficient information to conduct a preliminary screening while your application has been reviewed and found to be lacking sufficient information to conduct a preliminary screening as per paragraph 22(1)(a) of the Mackenzie Valley Land Use Regulations (MVLUR).. For the applications to be considered complete, please submit the following information to our office:

1. A comprehensive Engagement Plan, including an Engagement Log, which includes copies of all correspondence and minutes of all meetings held between yourselves and communities and Aboriginal groups and First Nations organizations listed in Table 1.

Table 1: Parties to Engage to Support Applications

Akaiicho Implementation Agreement Implementation Officer
City of Yellowknife
North Slave Métis Alliance
Northwest Territory Métis Nation
Tlicho Government including the Kwe Beh Working Group
Yellowknifes Dene First Nation
Northwest Territories Power Corporation
Local lease holders (GNWT Department of Lands)

- A. Details of the meetings should include:
    - i. When contact was first initiated;
    - ii. The nature, dates, and locations of meetings held;
    - iii. A list of groups represented at the meetings;
    - iv. A list of the issues raised by the stakeholders; and
    - v. An indication of how the issues were addressed in the application.
  
  - B. If you are unable to contact and meet with any of these communities, Aboriginal groups or First Nations, please provide the reason(s) as to why the meeting(s) could not be held. Provide a listing, including the dates, of any phone calls or other means that may have been used to provide information about the project and to hear any interests or concerns of First Nations with respect to your development;
  
  - C. Additional information can be found on our website: [Engagement Guidelines for Applicants and Holders of Water Licences and Land Use Permits](#));
2. Improved representation of the existing and future camp layout. The layout should include all relevant camp infrastructure and representation of the location of the Dry Stack Tailings in relation to other project infrastructure. Information regarding the tailings facility monitoring and management should also be provided in more detail.
  
  3. A breakdown by water source, any amounts of water to be used for the proposed camp and any other proposed activities. Detailed information on water source capacities, water use calculations and limits for Winter Road Construction are required. Under-ice water use needs to be demonstrated to be below 10% available water under the ice, with a minimum water depth of 1.5 m beneath the ice. How were the capacities in the WL Application calculated? Available water from Lakes A, B, C, D, and E have not been calculated. What is the location and depth of water intakes? Is there bathymetric information to support the volume assessments? Are these waterbodies fish-bearing?
  
  4. Details on work completed for the original bulk sample (1989) and production (1990-1997) as the MVLWB may not to be in possession of such documents.
  
  5. Revised Closure and Reclamation Plan that conforms to the Board's Guidelines. [MVLWB Guidelines for the Closure and Reclamation of Advanced Mineral Exploration and Mine Sites in the Northwest Territories \(2013\)](#). Some of these requirements include, but are not limited to, the following:
    - a) Renewed or updated statements of closure objectives for the mine site;
    - b) Development of a reclamation and progressive reclamation schedule;
    - c) Detailed or updated descriptions of closure options related to temporary or permanent mine closure to a level of detail appropriate to the information available (the level of detail should increase through the mine life as new information is made available);
    - d) Contingency plans for reclaiming individual project components (e.g., contingencies in case poor water quality prevents the flooding of an open pit);

- e) An explanation of which closure options were considered and why selected closure activities were chosen for each project component;
  - f) Updated reclamation research plans;
  - g) Evidence that the closure objectives are achievable through the selected closure activities;
  - h) Closure criteria for each closure objective;
  - i) Updated photographs depicting the original landscape, what the site looks during operations, and a description of the anticipated landscape at final closure with less emphasis on the baseline conditions and information
  - j) Plans for upcoming engagement;
  - k) Details of post-closure monitoring requirements and responsibilities (these should become more refined as projects approach the end of operations);
  - l) Updated descriptions of the likely post- reclamation risks to environmental, human, and wildlife health (risk assessment); and
  - m) Updated closure and reclamation liability costs and financial security estimates to a level of detail reflective of the available information. Currently, the CRP lacks significant details and evidence of any assumptions made in derivation of the cost estimates is not apparent. The CRP is not comprehensive enough to enable parties to determine whether the estimates are adequate to achieve potential scope of work and closure objectives not fully defined.
6. Details to clarify closure cost estimates, including:
    - a) Cost for a third-party contractor to perform all the work;
    - b) Adjustment for inflation; and
    - c) Market adjustment factor at 0%.
  7. Updated Spill Contingency Plan that includes a map meeting the requirements outlined in the [Guidelines for Spill Contingency Planning](#) and applicable Safety Data Sheets.
  8. Updated Waste Management Plan to reconcile a Mill Waste document that was not included in the Application and to replace Figure 3 as it is not currently legible.
  9. Completed copies of the [Mining Industry Questionnaire Oct 2003](#) and/or the [Mining Exploration Questionnaire Oct 2003](#) in support the Water Licence Application, as appropriate.
  10. Confirmation and discussion of relevant triggers for licence being applied for, Type A / B, in accordance with Schedule E of the [Waters Regulations](#).
  11. GIS Data to satisfy the requirements in MVLWB's *Guideline for Geographic Information Systems (GIS) Submission Standard*. Data format must be compatible with latest ArcMap Desktop Vector: .shp, .shx, .dbf (typical), Raster: GeoTIFF (rarely submitted). Projection (NAD/83/NWT Lambert) should be the same as map projection. Metadata (.xml) (note: can usually be viewed in a web browser). Attribute data (.dbf) with additional fields for describing operation features.

12. Information related to proposed waste to be transported for off-site disposal along with authorization from the respective facilities receiving such waste if located in the NWT. A letter from any municipal disposal facility or community confirming they will accept wastes from your activities for off-site disposal is required.
13. Details of proposed Effluent Quality Criteria (EQC) from any points of discharge along with relevant rationale.
14. Confirmation of the term for the water licence being applied.
15. Details on all watercourse crossings.
16. Confirmation from GNWT-ENR on whether a Wildlife Monitoring and Management Plan is required.
17. Details on the total number of sumps, dimensions of each and associated closure and reclamation measures proposed.
18. Details on the total land area in hectares that will potentially be disturbed.
19. Information pertaining to how the geochemical properties of waste rock are rock being assessed.
20. Application fees made out to the **Receiver General for Canada**.

Upon receipt of this information, your application will be reviewed in accordance with the *Waters Act* and the *Mackenzie Valley Resource Management Act*. For further assistance, please refer to the "Guide for Completing Water Use Applications to the Mackenzie Valley Land and Water Board" available on our website at [www.mvlwb.ca/mv](http://www.mvlwb.ca/mv) under "Forms and Guides".

If this information is not provided within 90 days of the date of this letter, then it shall be assumed that you do not wish to continue with the Application.

If you have any questions or concerns regarding this letter, please contact me at (867) 766-7465, 867-446-0871 or email [sallerston@mvlwb.com](mailto:sallerston@mvlwb.com).

Yours sincerely,

Shannon Allerston  
Regulatory Specialist
