

# Gordon Lake Group Sites - Long-Term Monitoring Year 5

Crown Indigenous Relations and Northern Affairs Canada

Project number: 60710609

April 22, 2024

## Statement of Qualifications and Limitations

The attached Report (the "Report") has been prepared by AECOM Canada Ltd. ("AECOM") for the benefit of the Client ("Client") in accordance with the agreement between AECOM and Client, including the scope of work detailed therein (the "Agreement").

The information, data, recommendations and conclusions contained in the Report (collectively, the "Information"):

- is subject to the scope, schedule, and other constraints and limitations in the Agreement and the qualifications contained in the Report (the "Limitations");
- represents AECOM's professional judgement in light of the Limitations and industry standards for the preparation of similar reports;
- may be based on information provided to AECOM which has not been independently verified;
- has not been updated since the date of issuance of the Report and its accuracy is limited to the time period and circumstances in which it was collected, processed, made or issued;
- must be read as a whole and sections thereof should not be read out of such context;
- was prepared for the specific purposes described in the Report and the Agreement; and
- in the case of subsurface, environmental or geotechnical conditions, may be based on limited testing and on the assumption that such conditions are uniform and not variable either geographically or over time..

AECOM shall be entitled to rely upon the accuracy and completeness of information that was provided to it and has no obligation to update such information. AECOM accepts no responsibility for any events or circumstances that may have occurred since the date on which the Report was prepared and, in the case of subsurface, environmental or geotechnical conditions, is not responsible for any variability in such conditions, geographically or over time.

AECOM agrees that the Report represents its professional judgement as described above and that the Information has been prepared for the specific purpose and use described in the Report and the Agreement, but AECOM makes no other representations, or any guarantees or warranties whatsoever, whether express or implied, with respect to the Report, the Information or any part thereof.

Without in any way limiting the generality of the foregoing, any estimates or opinions regarding probable construction costs or construction schedule provided by AECOM represent AECOM's professional judgement in light of its experience and the knowledge and information available to it at the time of preparation. Since AECOM has no control over market or economic conditions, prices for construction labour, equipment or materials or bidding procedures, AECOM, its directors, officers and employees are not able to, nor do they, make any representations, warranties or guarantees whatsoever, whether express or implied, with respect to such estimates or opinions, or their variance from actual construction costs or schedules, and accept no responsibility for any loss or damage arising therefrom or in any way related thereto. Persons relying on such estimates or opinions do so at their own risk.

Except (1) as agreed to in writing by AECOM and Client; (2) as required by-law; or (3) to the extent used by governmental reviewing agencies for the purpose of obtaining permits or approvals, the Report and the Information may be used and relied upon only by Client.

AECOM accepts no responsibility, and denies any liability whatsoever, to parties other than Client who may obtain access to the Report or the Information for any injury, loss or damage suffered by such parties arising from their use of, reliance upon, or decisions or actions based on the Report or any of the Information ("improper use of the Report"), except to the extent those parties have obtained the prior written consent of AECOM to use and rely upon the Report and the Information. Any injury, loss or damages arising from improper use of the Report shall be borne by the party making such use.

This Statement of Qualifications and Limitations is attached to and forms part of the Report and any use of the Report is subject to the terms hereof.

## Executive Summary

AECOM Canada Ltd. (AECOM) was contracted by Crown indigenous Relations and Northern Affairs Canada – Contaminants and Remediation Directorate (CIRNAC-CARD) to conduct the Year 5 Long-Term Monitoring (LTM) program at the Gordon Lake Group (GLG) of sites. The program is comprised of six mine sites and three advanced exploration sites located approximately 80 kilometres northeast of Yellowknife, NT. The sites are as follows:

- Burnt Island (mine sites)
- Camlaren (mine site)
- Goodrock (mine site)
- Kidney Pond (mine site)
- Murray Lake (advanced exploration site)
- Storm property (advanced exploration site)
- Treacy (mine site)
- Try Me (advanced exploration site)
- West Bay (mine site)

The purpose of the Phase I LTM Plan is to verify that the selected remedial/risk management measures implemented during the remediation program remain protective of human health and the environment by monitoring the potential for residual risks remaining at the nine Sites following the completion of the Gordon Lake remediation program.

### SNP and Surface Water Monitoring

Under Phase I of LTM, Year 5 consists of monitoring the Surveillance Network Program (SNP), consisting of groundwater (six locations at Camlaren) and surface water sampling in 18 locations; one location at Burnt Island, seven locations at Camlaren (two locations dry and not sampled), one location at Kidney Pond, one location at Treacy, eight locations at West Bay (two of which were dry and removed from the scope, five locations are additional surface water locations at West Bay). Surface water sample analysis consisted of:

- In-Situ parameters: temperature, specific conductivity, total dissolved solids, pH, turbidity, dissolved oxygen, oxidation reduction potential
- General chemistry: total ammonia, total nitrate + nitrite, total phosphorous, orthophosphate, total organic carbon, pH, temperature, conductivity, alkalinity, calcium, chloride, hardness, magnesium, potassium, sodium, sulphate, total suspended solids, total dissolved solids
- Total metals: total elemental analysis by ICP-metal scan of ICP-MS 24 element scan: includes all elements in total metals plus antimony, arsenic, barium, bismuth, cesium, chromium, lithium, thallium, uranium, vanadium.
- Hydrocarbons: extractables hydrocarbons, benzene, toluene, ethylbenzene, xylene, extractable petroleum hydrocarbons

Results of the Year 5 monitoring indicate generally consistent results to previous Years; however, some exceedances were reported in Year 5 which were not reported previously at stations 2016-11a, 2016-11b3, and 2016-11d. It is unknown at this time if there is an increasing trend in metal concentrations, however it should be noted that 2023 experienced persistently dry conditions and decreasing water levels, which may have increased the overall metal concentrations.

## TSCA Performance and Geotechnical Assessment

Under Phase I of LTM, Year 5 monitoring consists of Camlaren Tailings and Soil Containment Area (TSCA) performance monitoring including recording measurements from thermistors, standpipe wells, and vibrating wire piezometers at eleven locations. A geotechnical visual dam inspection was also completed, results of which are discussed in a separate letterhead.

Results of the Year 5 monitoring of thermistor VT2 indicate generally consistent results to previous Years; however, it was noted that temperature data collection at the VT1 location has been disrupted and data after September 18, 2022 has not been collected. Unless the VT1 sensor has been deliberately decommissioned, it is recommended that this sensor be inspected and repaired or replaced if further monitoring is required.

Results of the Year 5 monitoring of the vibrating wire piezometer locations VB1, VB2 and VB3 indicate generally consistent results to previous Years; however, it was noted that data collection for VW52117 at the VB2 location has been disrupted and data after September 4, 2020 has not been collected. This data collection disruption for VW52117 has been noted in the previous Year 3 and Year 4 LTM reports. It is recommended that the VW52117 sensor be inspected and repaired, or replaced during Phase II of long-term monitoring.

Groundwater sample analysis consisted of:

- In-Situ parameters: temperature, specific conductivity, total dissolved solids, pH, turbidity, dissolved oxygen, oxidation reduction potential
- General chemistry: total ammonia, total nitrate + nitrite, total phosphorous, orthophosphate, total organic carbon, pH, temperature, conductivity, alkalinity, calcium, chloride, hardness, magnesium, potassium, sodium, sulphate, total suspended solids, total dissolved solids
- Total metals: total elemental analysis by ICP-metal scan of ICP-MS 24 element scan: includes all elements in total metals plus antimony, arsenic, barium, bismuth, cesium, chromium, lithium, thallium, uranium, vanadium.

Results of the Year 5 monitoring of standpipe wells indicate generally consistent results to previous Years; however, some exceedances were reported in Year 5 which were not reported previously at stations MW1, MW3, MW4, MW6. It is unknown at this time if there is an increasing trend in metal concentrations and will be evaluated in the Performance Assessment Review (PAR).

## Visual Monitoring

Visual monitoring at all nine sites include inspection and identifying the following; erosion, frost action, sloughing and cracking, animal burrows, vegetation re-establishment and percentage cover, vegetation stress, soil or water staining, odours, seepage points or ponded water, exposed debris, and any other features which may compromise the integrity of the site.

Areas for further observation or repair are:

- Camlaren – Impacted soil areas CAM\_SO\_04, CAM\_SO\_06, and CAM\_SO\_07: stained soil in four separate locations. One location exhibited faint hydrocarbon odour. It is suggested that during the Year 6 monitoring program that the stained soil locations continue to be observed for changes. The areas could be excavated via a shovel with soil being removed from site in 5 gallon pails.
- Camlaren – The aluminum debris pile located north of the TSCA should continue to be observed for any changes in the Year 6 monitoring program.
- Kidney Pond - Impacted soil area KID\_SO\_07: areas of settling likely caused by ponding water.
- Kidney Pond – Portal: Rills observed on south side of slope. Unknown if worsening from previous Years.

- Kidney Pond – Waste Rock KID\_WR\_01: cracks and settlement over covered material. Loose material is not stable and settles approximately 0.4 m deep posing a walking hazard to animals and humans.
- Burnt Island – Portal: deep depressions at top of backfilled area. Top of slope should be closely monitored.
- Goodrock – North Mine Shaft: Shaft observed broken from the base.
- West Bay – Open Pit: Barricades are not performing adequately. A gap remains at the south side of the fence and the southeast side has collapsed at the top, allowing access to the pit by animals and humans.

# 1. Introduction

AECOM Canada Ltd. (AECOM) was contracted by Crown Indigenous Relations and Northern Affairs Canada – Contaminants and Remediation Directorate (CIRNAC-CARD) to conduct the Year 5 Long Term Monitoring (LTM) program at the Gordon Lake Group (GLG) sites. The GLG sites fall within the Akaitcho Territory and are also located in the Mowhì Gogha De Niitlèè boundary within the Wek'èezhìi management area of the Tlicho settlement area. All nine Sites fall under the custodial responsibility of CIRNAC-CARD. The area is asserted as a traditional use area for Metis people of the Great Slake Lake area, who are represented by the Northwest Territory Métis Nation and the North Slave Métis Alliance.

The program is comprised of six mine sites and three advanced exploration sites located approximately 80 kilometres (km) northeast of Yellowknife, NT. The sites are as follows:

- Burnt Island (mine sites)
- Camlaren (mine site)
- Goodrock (mine site)
- Kidney Pond (mine site)
- Murray Lake (advanced exploration site)
- Storm property (advanced exploration site)
- Treacy (mine site)
- Try Me (advanced exploration site)
- West Bay (mine site)

The general site locations are presented in **Figure 1** in **Appendix A**, with details of each site presented in **Figure 1** through **Figure 26** in **Appendix A**.

Remediation activities were completed between 2017 and 2019 by Delta Engineering and Nahanni Construction, in Joint Venture (DNV), with Stantec Consulting Inc. (Stantec) engaged to provide construction contract supervision.

## 1.1 Objectives

The purpose of the Phase I LTM Plan is to verify that the selected remedial/risk management measures implemented during the remediation program remain protective of human health and the environment by monitoring the potential for residual risks remaining at the nine Sites following the completion of the Gordon Lake remediation program. At the completion of this phase, results will be evaluated within a Performance Assessment Report to determine if monitoring is concluded (i.e. site closure), or if additional monitoring is required at a reduced frequency.

Should monitoring results indicate remedial activities have failed to meet LTM objectives or monitoring endpoints, additional remedial effort may be required. The current Phase I LTM contains only those requirements of the initial phase of LTM (Year 1 to 5). The design of the next phase of monitoring, if deemed necessary, will be founded on an adaptive management approach.

## 1.2 Scope of Work

The scope of work for the Year 5 LTM Program were defined as follows:

- Prepare a Safe Work Plan (SWP)
- Submit a Work Plan including the proposed schedule, sampling plan, measurement methodologies, quality assurance / quality control (QA/QC) procedures and Project personnel
- Review the Phase I LTM Plan, Years 1 through 4 Monitoring Reports as well as the Water Licence and Land Use Permit
- Complete a geotechnical visual dam inspection at the Camlaren Tailings and Soil Containment Area (TSCA)
- TSCA performance monitoring consisting of recording measurements from thermistors, standpipe wells, and vibrating wire piezometers at eleven locations
- Surveillance Network Program (SNP) consisting of ground water sampling at six locations at Camlaren, and surface water sampling in 18 locations: one at Burnt Island, seven at Camlaren, one at Kidney Pond, one at Treacy, eight at West Bay.
- Visual monitoring at all nine sites and TSCA geotechnical inspection identifying the following; erosion, frost action, sloughing and cracking, animal burrows, vegetation re-establishment and percentage cover, vegetation stress, soil or water staining, odours, seepage points or ponded water, exposed debris, and any other features which may compromise the integrity of the site
- Provide training to and include the Job Shadow arranged by CIRNAC as part of the Community Based Monitoring initiative
- Complete a Progress Report after the completion of each field investigation
- Complete a Job Shadow report following the field program
- Produce Year 5 Long-Term Monitoring Report
- Produce Year 5 Long-Term Monitoring Geotechnical TSCA Dam Inspection Report

## 2. Site Description

### 2.1 Site Identification

Site specific identification information is outlined in **Table 2-1** below.

**Table 2-1. Site Specific Identification Information**

Identification Information	Burnt Island	Camlaren	Goodrock	Kidney Pond	Murray Lake	Storm Property	Treacy	Try Me	West Bay

## 2.2 Site History

The GLG Sites were active between the late 1930s and 2008 with several companies involved in the mining operations at the Sites. Activities ranged from open-pit mining to exploratory drilling and were generally undertaken independently between the mine sites. With the mine sites abandoned, several environmental concerns arose from materials and debris left on-site including:

- Petroleum hydrocarbon and/or metal impacted soil/tailings, sediment/submerged tailings, and surface water
- Tailings and waste rock piles with the potential to produce acid rock drainage (ARD)
- Hazardous and non-hazardous debris and physical hazards (mine openings and trenches)

These concerns were remediated over several field seasons between 2017 and 2019 by DNV. Upon completion of the remedial activities, Stantec completed the Phase I LTM plan to monitor its effectiveness and completed Years 1 and 2 of the LTM Program in 2019 and 2020 respectively. Englobe completed the Years 3 and 4 of the LTM Program in 2021 and 2022 respectively.

All Sites were un-occupied at the time of both site inspections. However, it is understood that some Sites are used by hunters and trappers, recreational fishing, and the cabin located on the Storm property is known to house community members from Ndilo.

## 2.3 Climate and Weather

The nearest long-term weather station is in Yellowknife, NWT, located 88 to 200 km away from the four GSL sites. As part of a Continental Sub-Arctic Climatic Zone, the GLG sites experience short cool summers and long cold winters. Frost-free days are approximately 111 days and very cold days (> -30 degrees Celsius; °C) are approximately 53 days (Climate Atlas of Canada). The lowest temperatures are typically recorded in January with an average daily temperature of -25.6 °C and an extreme minimum of -51.2 °C. The highest average temperatures are in July, during which the average is 17.0 °C and the extreme maximum is 32.5°C in 1989 (ECCC 2023).

Total annual precipitation in Yellowknife is an average 289 millimetres (mm), with a little over half falling as rain (170 mm) and half as snow (158 mm). The highest rainfall typically occurs in the summer, from June to September (from 29 to 41 monthly), while the highest snowfall typically occurs in November (37 mm) (ECCC 2023).

## 2.4 Hydrology

The watershed surrounding the GLG sites is difficult to define as the area is encompassed by a vast number of smaller water bodies. The Cameron River system, which is located near the West Bay site, has been defined as the location to which the Lake's water outlets. Seven months of the year, typically subzero temperatures cause the surface water to freeze. This may cause a flux in precipitation infiltration, which results in either surface water runoff or a greater accumulation on the surface (Humphries, 2005).

## 2.5 Geology

The following information is drawn from the Stantec Gordon Lake Gap Assessment Report (Stantec, 2016a) based on the review of the Stantec Phase I LTM Plan – Gordon Lake Group of Sites (Stantec, 2018) and Stantec LTM (Year 1) – Gordon Lake Group of Sites (Stantec, 2020e).

The GLG Sites lie within the Slave Province, an Archean granite-greenstone terrane located in the northwestern Canadian Shield. The supracrustal rocks of this terrane comprise sedimentary and volcanic rocks intruded by granitic bodies that have undergone multiple phased deformation events and date between 2.71 and 2.65 Ga (1x10<sup>9</sup> years ago) (Mortensen et al., 1988). The Sites occur within the Burwash Formation, part of the Duncan Lake Group, assigned to the Yellowknife Supergroup (Bleeker and Villeneuve, 1995). The metasedimentary rocks of the Burwash Formation are dominantly low to high grade metamorphosed turbidite (metaturbite) sequences of well-preserved mudstone grading to

greywacke. The GLG Sites are situated on two members of the Burwash Formation, Atl and Atm, low-grade and medium-grade metaturbites, respectively.

The Slave Province is recognized for its province-wide zoning of three major gold deposit types; gold hosted in 1) quartz veins, 2) shear zones, and 3) iron formations. Most gold deposits formed before the intrusion of the major granitic bodies (Ferguson et al., 2005). The GLG Sites feature mainly gold-sulphide bearing white-smoky quartz veins hosted in metaturbites of the Burwash Formation. Sulphide minerals associated with these deposit types include pyrite, pyrrhotite, marcasite, chalcopyrite, arsenopyrite, galena, and sphalerite.

This region was last covered by the Late Wisconsin glaciation event until about 11,000 years before present (BP) and was completely ice-free by 10,000 BP (Dyke and Prest, 1987). Paleo ice flow was generally to the southwest (Kerr, 1990) as apparent by orientation of drumlins and eskers (Othof et al., 2014).

Retreating ice sheets deposited fine-grained glaciolacustrine sediments below 320 to 350 metre (m) elevation in the Great Bear and Great Slave basins. In the Gordon Lake area, re-worked glacial and glaciofluvial sediments are the dominant surficial material with till thickness and distribution increasing westerly and northwesterly. Till thickness varies but is generally greater than 2 m occurring as silt to gravel blankets, following bedrock topography, and may include patches of till veneer or drumlinoids.

With respect to permafrost, the Gordon Lake area is located within the extensive discontinuous permafrost zone, where permafrost can be found on 50% to 90% of the land (Heginbottom et al., 1995). Within the extensive discontinuous permafrost zone, ground ice content in the upper 10 m of ground is believed to range from low to medium (<10% to approximately 20% by volume) and consist mainly of frozen pore water (i.e., interstitial ice), ice lenses and ice veins (i.e., segregated ice and reticulated ice). Ice wedges, which are a type of patterned ground resulting from thermal contraction and cracking of the ground surface (ACGR, 1988), might occur locally.

The distribution of the permafrost in the area is related to several interconnected factors such as the local climate, ground surface topography, material types and textures, vegetation coverage and drainage conditions. Similarly, the variation in the amount of ground ice present within the permafrost is found to be directly related to factors such as the nature of the surficial deposits and characteristics of the local terrain.

No data is available on the local distribution of the permafrost in the Gordon Lake area; however, it was suggested that peat bogs and fine-grained deposits (e.g., silty to clayey lacustrine and/or glaciolacustrine sediments) are likely the only terrain units containing permafrost in the GLG Sites area. Bedrock outcrops and well to rapidly drained, coarse-grained deposits such as till and glaciofluvial deposits are likely free of permafrost. Where permafrost is present, the active layer (i.e., the portion of soil that thaws each summer and refreezes in the winter) would typically range between 0.5 m to 1.5 m deep and would vary greatly depending on local ground conditions.

## 2.6 Biological Environment

The GLG Sites are located in the Taiga Shield – Great Slave Upland Low Subarctic Ecoregion of the Northwest Territories. The Total area of this ecoregion in the Northwest Territories is approximately 15,431 square kilometres (km<sup>2</sup>) or 13.5% of the Taiga Shield LS Ecoregion. This Ecoregion is known for having a bedrock-dominated landscape that is sloped towards the southwest, which supports scattered black spruce woodland growth on the bedrock outcrops. In areas of till veneers and blankets, it is common to have dense black spruce forests occur. In areas of outwash, white spruce woodlands are common and Jack pine can be found in areas of lower elevation.

### 3. Year 5 Long-Term Monitoring Program

The LTM programs are conducted to meet regulatory requirements by various regulatory bodies that include Mackenzie Valley Land and Water Board (MVLWB), the Canadian Council of Ministers of the Environment (CCME) Canadian Environmental Quality Guidelines, and Federal Interim Groundwater Quality Guidelines (FIGQG).

AECOM developed a work plan designed to meet the requirements of Year 5 of the Phase I LTM Plan. AECOM reviewed historical reports, provided by CIRNAC-CARD, completed during past investigation of the Site, providing information regarding the previous methodologies employed, past and present site conditions, previous difficulties encountered, future recommendations and potential considerations that may need to be addressed when completing the work plan.

Key documents related to site monitoring are provided in **Table 3-1** below.

**Table 3-1. Relevant Documents**

Document No.	Report Title	Date	Authors
1	Water License MV2016L8-0006	February – 2017	Mackenzie Valley Land and Water Board
2	Land Use Permit	December – 2016	Mackenzie Valley Land and Water Board
3	Phase I – Long-Term Monitoring Plan – Gordon Lake Group of Sites	December – 2018	Stantec Consulting Ltd. (Stantec, 2018)
4	Long-Term Monitoring (Year 1) – Gordon Lake Group of Sites	March – 2020	Stantec Consulting Ltd. (Stantec, 2020)
5	Long-Term Monitoring (Year 2) – Gordon Lakes Group of Sites	March – 2021	Stantec Consulting Ltd. (Stantec, 2021)
6	Long-Term Monitoring (Year 3) – Gordon Lakes Group of Sites, NWT	February – 2022	Englobe Corp. (Englobe, 2022)
7	Comprehensive Monitoring (Year 4) Report – Long-Term Monitoring of Gordon Lake Group, NWT	November – 2022	Englobe Corp. (Englobe, 2022a)

The monitoring requirements and methodologies outlined in the work plan are detailed in the following sections.

#### 3.1 Monitoring Requirements and Methodologies

##### 3.1.1 Visual Monitoring Requirements

Non-intrusive visual monitoring activities will include taking photos of established locations noting the following: noting features of erosion, frost action, sloughing and cracking, animal burrows, vegetation re-establishment and percentage cover, vegetation stress, soil or water staining, odours, seepage points or ponded water, exposed debris, condition of monitoring instruments, and any other features which may compromise the integrity of the site. Photographic records that note scale, GPS reference (datum WGS84) and directional viewpoint will be provided to document the general conditions and to substantiate all recorded observations.

The visual monitoring locations are presented in Figures 2 through 26 in Appendix A and outlined below in **Table 3-2**.

**Table 3-2. Visual Monitoring Locations**

LTM Station	Hazard Category	Monitoring Requirements	Phase I LTM Frequency
<b>Burnt Island</b>			
Portal	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement	Quinquennially. Years 1 and 5
Tailings	Tailings	Verify cover material is stable with no significant resulting erosion or washout.	Biennially. Years 1, 3, and 5
Mine Shaft	Mine Opening	Verify the backfill material is stable with no significant resulting erosion or settlement. Verify the structural stability of the mine opening cap.	Quinquennially. Years 1 and 5
BUR_WR_01	Waste Rock	Verify no visual signs (low vegetation, stressed vegetation, discolouration, etc.) of acid rock drainage (ARD) down gradient of remaining impacts.	Quinquennially. Years 1 and 5
<b>Camlaren</b>			
CAM_SO_04	Metal Impacted Soil	Verify excavation backfill material is stable with no significant resulting erosion or washout into downgradient water.	Biennially. Years 1, 3, and 5
CAM_SO_06	Metal Impacted Soil		
CAM_SO_07	Metal Impacted Soil		
CAM_SO_08	Metal Impacted Soil		
CAM_SO_12	Metal Impacted Soil		
CAM_SO_20	Metal Impacted Soil		
CAM_SO_23	Metal Impacted Soil	Verify excavation backfill material is stable with no significant resulting erosion or washout into downgradient water. Visually monitor vegetative health to confirm stable or increasing growth.	Biennially. Years 1, 3, and 5
CAM_SO_01	PHC Impacted Soil		
CAM_SO_03	PHC Impacted Soil		
CAM_SO_05	PHC Impacted Soil		
CAM_SO_14	PHC Impacted Soil	Verify excavation backfill material is stable with no significant resulting erosion or washout into downgradient water. Visually monitor vegetative health to confirm stable or increasing growth.	Biennially. Years 1, 3, and 5
CAM_SO_14	PHC Impacted Soil		
Shaft	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement. Verify the structural stability of the mine opening cap.	Quinquennially. Years 1 and 5

LTM Station	Hazard Category	Monitoring Requirements	Phase I LTM Frequency
<b>Goodrock</b>			
GOO_HS_01	Metal Impacted Soil	Verify cover material is stable with no significant resulting erosion or washout.	Biennially. Years 1, 3, and 5
South Pit	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement.	Quinquennially. Years 1 and 5
North Mine Shaft	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement. Verify the structural stability of the mine opening cap.	Quinquennially. Years 1 and 5
GOO_WR_01	Waste Rock	Verify no visual signs of ARD down-gradient of remaining impacts.	Quinquennially. Years 1 and 5
GOO_WR_02	Waste Rock		Quinquennially. Years 1 and 5
<b>Kidney Pond</b>			
KID_SO_07	Co-mingled Impacted Soil	Verify excavation backfill material is stable with no significant resulting erosion or washout into down gradient water. Visually monitor vegetative health to confirm stable or increasing growth.	Biennially. Years 1, 3, and 5
KID_SO_11	Co-mingled Impacted Soil		Biennially. Years 1, 3, and 5
KID_SO_10	PHC Impacted Soil		
KID_WR_01	Waste Rock	Verify excavation backfill and large area of regraded material is stable with no significant resulting erosion or washout, especially into down gradient water. Visually monitor vegetative health to confirm stable or increasing growth.	Biennially. Years 1, 3, and 5
Portal	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement.	Quinquennially. Years 1 and 5
KID_WR_03	Waste Rock	Verify no visual signs of ARD down-gradient of remaining impacts.	Quinquennially. Years 1 and 5
KID_WR_04	Waste Rock		Quinquennially. Years 1 and 5
<b>Murray Lake</b>			
Main Shaft	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement.	Quinquennially. Years 1 and 5
Deep Trench/Shaft	Mine Opening		Quinquennially. Years 1 and 5
MUR_WR_01	Waste Rock	Verify no signs of ARD down-gradient of remaining impacts.	Quinquennially. Years 1 and 5
MUR_WR_02	Waste Rock		Quinquennially. Years 1 and 5

LTM Station	Hazard Category	Monitoring Requirements	Phase I LTM Frequency
<b>Storm Property</b>			
South Mine Shaft	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement.	Quinquennially. Years 1 and 5
North Mine Shaft	Mine Opening		Quinquennially. Years 1 and 5
STO_WR_01	Waste Rock	Verify no visual signs of ARD down-gradient of remaining impacts.	Quinquennially. Years 1 and 5
STO_WR_02	Waste Rock		Quinquennially. Years 1 and 5
<b>Treacy</b>			
TRE_SO_01	Metal Impacted Soil	Verify excavation backfill material is stable with no significant resulting erosion or washout into down-gradient water. Visually monitor vegetative health to confirm stable or increasing growth.	Biennially. Years 1, 3, and 5
TRE_SO_02	PHC Impacted Soil		Biennially. Years 1, 3, and 5
East Trench	Trench	Verify backfill material is stable with no significant resulting erosion or settlement.	Quinquennially. Years 1 and 5
West Trench	Trench		Quinquennially. Years 1 and 5
Shaft	Mine Opening	Verify backfill material is stable with no significant resulting erosion or settlement. Verify the structural stability of the mine opening cap.	Quinquennially. Years 1 and 5
<b>West Bay</b>			
Open Pit	Mine Opening	Verify barrier is structurally sound and remains effective.	Quinquennially. Years 1 and 5
WES_WR_01	Waste Rock	Verify no visual signs of ARD down-gradient of remaining impacts	Quinquennially. Years 1 and 5
WES_WR_02	Waste Rock		Quinquennially. Years 1 and 5

### 3.1.2 TSCA Performance Review

The TSCA is an engineered mine waste containment facility that encompasses the Camlaren mine tailings that is formerly part of the Tailings Containment Area, as well as impacted material and non-hazardous debris from the other GLG Sites. Impacted material and non-hazardous waste from the GLG Sites were transported to Camlaren in the winter of 2018, and some of the waste was transported via helicopter in the summer of 2018.

#### 3.1.2.1 TSCA Instrumentation

The bi-annual inspection of the TSCA instrumentation includes two thermistors, three vibrating wire piezometers with double nested vibrating wire sensors, two monitoring wells in the TSCA footprint and four monitoring wells outside of the TSCA perimeter installed as part of the performance monitoring. Locations of the instrumentation are presented in **Figure 8** in **Appendix A** and summarized below in **Table 3-3**.

**Table 3-3. TSCA Instrumentation Details**

Instrumentation Identification	Type of Installation	Northing	Easting	Ground Surface Elevation (masl) <sup>2</sup>
VT1	Thermistor String	6986005	388351	298.89
VT2	Thermistor String	6956055	388352	298.84
VB1	Vibrating Wire Piezometer	6985957	388335	298.11
VB2	Vibrating Wire Piezometer	6986026	388381	297.99
VB3	Vibrating Wire Piezometer	6986079	388353	298.48
MW1	Monitoring Well	6986005	388356	298.73
MW2	Monitoring Well	6986051	388352	298.96
MW3 <sup>1</sup>	Monitoring Well	6986073	388393	292.41
MW4 <sup>1</sup>	Monitoring Well	6985962	388376	294.52
MW5 <sup>1</sup>	Monitoring Well	6985922	388236	296.58
MW6 <sup>1</sup>	Monitoring Well	6986066	388238	295.45

<sup>1</sup>Monitoring well outside TSCA footprint

<sup>2</sup>masl – Metres above sea level

##### 3.1.2.1.1 Thermistors

Thermistor sensors are installed at 0.5 m intervals to monitor thermal conditions with depth throughout the TSCA mine waste. The temperature readings facilitate the establishment of long-term trends and whether permafrost will establish in the deposited waste. The temperature in the waste is also used for calibration of the vibrating wire piezometers. **Table 3-4** provides installation details for thermistors.

**Table 3-4. Thermistor Installation Details**

ID	Serial Number	Borehole Depth (m)	Depth of Lowest Thermistor (m)	Elevation of Lowest Thermistor (m)
VT1	4773	5.9	5.8	293.09
VT2	4774	7.0	7	291.84

Source: Stantec 2019

**3.1.2.1.2 Vibrating Wire Piezometers**

Vibrating wire piezometers are installed to measure pore pressures. The top piezometer measures pore pressures in tailings, the bottom piezometer measures pore pressures at the bottom of the borehole near bedrock or native soil. **Table 3-5** provides installation details for vibrating wire piezometers.

**Table 3-5. Vibrating Wire Piezometer Installation Details**

ID	Serial Number	Borehole Depth (m)	Depth of Piezometer (m)	Elevation of Piezometer (m)
VB1	52115	6.4	4.95	293.16
	52116		5.95	292.16
VB2	52117	6.1	4.8	293.19
	52118		5.8	292.19
VB3	52119	7.0	5.7	292.78
	52120		6.7	291.78

Source: Stantec 2019

**3.1.2.1.3 TSCA Instrumentation – Groundwater Monitoring Wells**

**Table 3-6** below provides installation details for groundwater monitoring wells within and surrounding the TSCA.

**Table 3-6. Groundwater Monitoring Wells Installation Details**

Borehole ID	Northing	Easting	Borehole Depth	Top of Screen		Bottom of Screen	
				Depth (m)	Elevation (m)	Depth (m)	Elevation (m)
MW1	6986005	388356	5.3	2.1	291.33	5.2	286.13
MW2	6986051	388352	7.1	4	287.86	7	280.86
MW3	6986073	388393	7.2	5.7	279.51	7.2	272.31
MW4	6985962	388376	3.8	2.3	288.42	3.8	284.62
MW5	6985922	388236	4.8	3.2	288.58	4.75	283.83
MW6	6986066	388238	5.4	3.9	286.15	5.4	280.75

Source: Stantec 2019

### 3.1.3 TSCA Performance Monitoring Requirements

A TSCA performance inspection will be completed biannually at Camlaren and include:

- Visual inspection of the TSCA for erosion, frost action, sloughing and cracking, animal burrows, vegetation re-establishment and percentage cover, vegetation stress, soil or water staining, odours, seepage points or ponded water, exposed debris, conditions of monitoring instruments, and any other features which may compromise the integrity of the site.
- Collection/download of thermal data from the two thermistors within the TSCA.
- Record the groundwater elevation within the TSCA from three vibrating wire piezometers and two groundwater monitoring wells within the TSCA footprint.

A TSCA geotechnical inspection will be completed by a Professional Geotechnical Engineer with expertise in dam inspections. The geotechnical inspection will include a visual inspection for any major failures and features that may compromise the integrity of the engineered structure. Photographic records that note the scale, GPS reference (datum WGS84), and directional viewpoint will be provided to document the condition and substantiate all recorded observations.

The TSCA performance inspection and geotechnical inspection requirements are provided below in **Table 3-7**.

**Table 3-7. Camlaren TSCA Performance and Geotechnical Inspection Monitoring Requirements**

Engineered / Administrative Control	LTM Station	Monitoring Requirements	Phase I LTM Frequency
Thermistors	VT1	Download thermal conditions within the TSCA from thermistors.	Biannually. Years 1 to 5
	VT2		Biannually. Years 1 to 5
Standpipe Wells	MW1	Measure the groundwater elevations (metres above sea level) within/around the TSCA.	Biannually. Years 1 to 5
	MW2		Biannually. Years 1 to 5
Vibrating Wire Piezometers	VB1	Download piezometer data to measure the groundwater elevations (masl) within the TSCA.	Biannually. Years 1 to 5
	VB2		Biannually. Years 1 to 5
	VB3		Biannually. Years 1 to 5
Visual Inspection (with Vegetation Monitoring)	-	Visually inspect top cover, slopes, toes, ditches, and instrumentation for signs of erosion, settlement, seepage, structural failure, and/or compromised liner and/or cap integrity. Visually monitor vegetative health to confirm stable or increasing growth.	Biannually. Years 1 to 5
TSCA	-	Visual inspection for any major failures and other features that may compromise the integrity of the engineered structure.	Annually. Year 1 to 5

### 3.1.4 Surface Water and Groundwater Monitoring Requirements

#### 3.1.4.1 Groundwater Monitoring

Groundwater monitoring wells (within and surrounding the TSCA) will be sampled and analyzed for contaminants of concern (COCs) to verify that contaminants contained within the engineered structure remain isolated from the surrounding environment. Samples will be collected using low-flow methodology i.e., peristaltic pump or bailer method when applicable and in-situ parameters recorded. Detailed field notes will be collected including but not limited to water column depth, collection depth, and any other relevant visual observations. In-situ parameters will be collected using a YSI ProDSS water quality meter. Nitrile gloves will be worn during all collection activities and equipment will be rinsed with deionized water between sample locations. Samples will be labelled on the laboratory provided bottle sets with sample number and date collected.

Groundwater monitoring down-gradient of the TSCA is anticipated to demonstrate a transient increase in contaminant concentrations resulting from the construction disturbance, and then to fall back to a steady-state. Action levels will be considered met if groundwater COC concentrations within the TSCA remain stable or below those observed after construction is completed and/or remain below applicable guidelines. The contaminant concentrations in monitoring wells within the TSCA will be monitored for reference purposes. Groundwater COC concentrations will be used as indicators for potential COCs in the down-gradient surface water. Action levels will be considered to not be met if groundwater elevations within the TSCA increase above those observed after construction is completed.

**Table 3-8** below presents the monitoring requirements for the groundwater monitoring program.

**Table 3-8. Groundwater Monitoring Program Requirements**

LTM Station	Sample Control ID (July)	Sample Control ID (September)	Description	Sample Type	Analytical Parameters	Phase I LTM Frequency
MW1	GLG-2023-00001-020	GLG-2023-00002-020	Groundwater well within TSCA footprint	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
MW2	GLG-2023-00001-021	GLG-2023-00002-021	Groundwater well within TSCA footprint	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
2016-7a (MW3)	GLG-2023-00001-001	GLG-2023-00002-001	Groundwater well around perimeter of TSCA	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
2016-7b (MW4)	GLG-2023-00001-002	GLG-2023-00002-002	Groundwater well around perimeter of TSCA	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
2016-7c (MW5)	GLG-2023-00001-003	GLG-2023-00002-003	Groundwater well around perimeter of TSCA	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
2016-7d (MW6)	GLG-2023-00001-004	GLG-2023-00002-004	Groundwater well around perimeter of TSCA	Groundwater	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
2016-7d (MW6) DUP	GLG-2023-00001-005	GLG-2023-00002-005	Duplicate of 2016-7d (MW6)	-	Note 1, 2, 3, 4, 5, 6	-

**Notes:**

1. *In-Situ: temperature, specific conductivity, total dissolved solids, pH, turbidity, dissolved oxygen, oxidation reduction potential*
2. *Nutrients: total ammonia, total nitrate + nitrite, total phosphorous, orthophosphate, total organic carbon*
3. *Standard: pH, Temperature, conductivity*
4. *Major Ions: alkalinity, calcium, chloride, hardness, magnesium, potassium, sodium, sulphate*
5. *Solids: total suspended solids, total dissolved solids*
6. *Total Metals: total elemental analysis by ICP-metal scan of ICP-MS 24 element scan: includes all elements in total metals plus antimony, arsenic, barium, bismuth, cesium, chromium, lithium, thallium, uranium, vanadium.*

**3.1.4.2 Surface Water Monitoring**

SNP monitoring includes the TSCA as well as areas down-gradient of significant remedial excavations as established by MVLWB presented in Annex A, Part B of the Water License issued for the Project. SNP Stations 2016-7, 2016-8 and 2016-11 are applicable to the Phase I LTM. SNP Stations 2016-7 and 2016-8 are associated with the TSCA (groundwater and discharge monitoring) and are part of monitoring requirements to assess TSCA performance and identify associated potential environmental impacts. SNP Stations 2016-11 are associated with surface water sampling down-gradient of significant remedial excavations across the nine sites.

Surface water and in-situ sampling will be conducted at 18 locations across six of the sites. While sampling, detailed field notes will be collected, including notes on approximate water column depth, collection depth, and any other relevant visual observations. In-situ parameters will be collected using a YSI ProDSS water quality meter. Nitrile gloves will be worn during all collection activities and equipment will be rinsed with deionized water between sample locations. Samples will be labelled on the laboratory provided bottle sets with sample number and date collected. **Table 3-9** below outlines the monitoring requirements. **Figure 2** through **Figure 26** in **Appendix A** present the sample locations at the sites.

**Table 3-9. Surface Water Monitoring Program Requirements**

LTM Station	Sample Control ID (July)	Sample Control ID (September)	Description	Sample Type	Analytical Parameters	Phase I LTM Frequency
<b>Burnt Island</b>						
2016-11a	GLG-2023-00001-006	GLG-2023-00002-006	Downgradient of significant excavation area	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
<b>Camlaren</b>						
2016-11b1	GLG-2023-00001-007	GLG-2023-00002-007	Downgradient of TSCA (northwest)	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-11b2	GLG-2023-00001-008	GLG-2023-00002-008	Downgradient of TSCA (southeast)	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-11b3	GLG-2023-00001-009	GLG-2023-00002-009	Downgradient of TSCA (northeast)	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-11b4	GLG-2023-00001-011	GLG-2023-00002-011	Downgradient of TSCA (southwest)	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-11c	GLG-2023-00001-012	GLG-2023-00002-012	Zenith Island. Downgradient of significant excavation area.	Surface Water	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-8a	GLG-2023-00001-016	GLG-2023-00002-016	Discharge from TCSA	Discharge	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
2016-8b	GLG-2023-00001-017	GLG-2023-00002-017	Discharge from TCSA	Discharge	Note 1, 3, 4 5, 6, 8, 9	Biannually. Years 1 to 5
<b>Kidney Pond</b>						
2016-11d	GLG-2023-00001-013	GLG-2023-00002-013	Downgradient of significant excavation area	Surface Water	Note 1, 3, 4, 5, 6, 8, 9	Biannually. Years 1 to 5
<b>Treacy</b>						
2016-11e	GLG-2023-00001-014	GLG-2023-00002-014	Downgradient of significant excavation area	Surface Water	Note 1, 3, 4, 5, 6, 8, 9	Biannually. Years 1 to 5
<b>West Bay</b>						
2016-11f	GLG-2023-00001-015	GLG-2023-00002-015	Downgradient of significant excavation area	Surface Water	Note 1, 3, 4, 5, 6, 8, 9	Biannually. Years 1 to 5
PIT1	GLG-2023-00001-020	GLG-2023-00002-020	South end of Open Pit; Downgradient of waste rock area	Surface Water	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
PIT2	GLG-2023-00001-023	GLG-2023-00002-023	North end of Open Pit; Downgradient of waste rock area	Surface Water	Note 1, 2, 3, 4, 5, 6	Biannually. Years 1 to 5
WET1	GLG-2023-00001-024	GLG-2023-00002-024	South pond inland of West Bay; Downgradient of waste rock area	Surface Water	Note 3, 4, 5, 7, 8	Biannually. Years 1 to 5
WET2	GLG-2023-00001-025	GLG-2023-00002-025	North pond inland of West Bay; Downgradient of waste rock area	Surface Water	Note 3, 4, 5, 7, 8	Biannually. Years 1 to 5
GL1	GLG-2023-00001-026	GLG-2023-00002-026	Centre of West Bay; Downgradient of waste rock area	Surface Water	Note 3, 4, 5, 7, 8	Biannually. Years 1 to 5
GL2	GLG-2023-00001-027	GLG-2023-00002-027	North end of West Bay; Downgradient of waste rock area	Surface Water	Note 3, 4, 5, 7, 8	Biannually. Years 1 to 5
GL3	GLG-2023-00001-028	GLG-2023-00002-028	South end of West Bay; Downgradient of waste rock area	Surface Water	Note 3, 4, 5, 7, 8	Biannually. Years 1 to 5

**Notes:**

- In-Situ: temperature, specific conductivity, total dissolved solids, pH, turbidity, dissolved oxygen, oxidation reduction potential*
- Nutrients: total ammonia, total nitrate + nitrite, total phosphorous, orthophosphate, total organic carbon*
- Standard: pH, Temperature, conductivity*
- Major Ions: alkalinity, calcium, chloride, hardness, magnesium, potassium, sodium, sulphate*
- Solids: total suspended solids, total dissolved solids*
- Total Metals: total elemental analysis by ICP-metal scan of ICP-MS 24 element scan: includes all elements in total metals plus antimony, arsenic, barium, bismuth, cesium, chromium, lithium, thallium, uranium, vanadium.*

7. *Hydrocarbons: extractables hydrocarbons, benzene, toluene, ethylbenzene, xylene*
8. *Ammonia as N, Nitrate as N, Nitrite as N,*
9. *Extractable petroleum hydrocarbons*

### 3.1.4.3 QA/QC

A total of two duplicate samples (over 10%) will be collected for QA/QC purposes and analyzed for the suite of parameters as detailed above in **Table 3-8** and **Table 3-9**. QA samples will be collected by splitting the original sample into two laboratory sampling containers. AECOM will review all laboratory results and laboratory supplied QA/QC reports upon receipt to verify data. This will include confirming the blind duplicate results with the parent sample and reviewing any other flags within the laboratory data that could impact the reliability of the data.

## 3.2 Regulatory Framework and Site Criteria

Based on the review of the Stantec Phase I LTM Plan, the CCME Canadian Water Quality Guidelines (CWQG) for the Protection of Aquatic Life – Freshwater Aquatic Life (FAL) and FIGQG for Federal Contaminated Sites (Government of Canada, June 2016 (version 4) revised November 2016) have been used as regulatory guidelines for the GLG Sites. The analytical results of the LTM will be compared to the CCME CWQG FAL long-term guideline values and the Tier 1 FIGQG for agriculture land use for coarse grained soil types.

## 3.3 Quality Assurance / Quality Control

Surface water chemistry results from Year 5 were reviewed for quality, with respect to accuracy, precision, bias, sample hold times, and reported detection limits (RDLs). Laboratory results were verified in relation to replicate and blank results, hold times, and established data quality objectives (DQOs). Laboratory quality control results were examined to identify problematic data. Only QA/QC data for AECOM's Year 5 monitoring program are discussed in this report.

The QA/QC plan included the use of field duplicates, a field blank, a trip blank, proper sampling containment, preservation, handling, and transportation. Bureau Veritas (BV) is accredited by the Standards Council of Canada (SCC) and was used to analyze the surface water samples. QA/QC procedures included the calibration of measuring devices for direct measurements of parameters during execution of the Field Program. This serves to support the data, and decisions based on these data, as technically sound and statistically valid. A field blank was not collected during the July program; however the duplicate sample collection provides the minimum QA/QC requirement for the program.

The purpose of the field blank sample is to determine contaminants or analytical errors, or bias, stemming from sampling collection and analysis. Such contamination may result from bottles and other glassware, sampling equipment and conditions, preservatives, transportation and storage, or the laboratory analysis.

Bureau veritas completes their own QA/QC program and provides results within the Certificate of Analysis Reports. AECOM considers the analytical sample results reliable with the exclusion of the field blank sample.

The analytical results for the duplicates are included in Table B-5 in Appendix 5. The results of the laboratory QA/QC analyses are provided in the laboratory Certificate of Analysis (COA), found in Appendix E. The COA analyses included method blanks, matrix spikes, laboratory control samples, and matrix duplicates. The laboratory QA/QC report was reviewed, and the laboratory data has been assessed to be reliable.

In summary, the results of the QA/QC analysis indicated no significant QA/QC issues affecting the overall results of this report. The data collected during the investigation is considered reliable.

### 3.3.1 Sample Management and Quality Control

Samples were collected into clean sample bottles and vials provided by the laboratory. Each sample was clearly labeled with a unique identification number. Once collected, samples were stored in coolers with

ice until shipped to the laboratory. Chain-of-custody documentation was completed and attached to sample shipment.

All coolers were returned to Yellowknife each evening on the helicopter, with samples stored in the coolers on ice at BV depot for shipment to its southern laboratories. All samples were shipped the same day.

### **3.3.2 Sampling Quality Control**

Field duplicate samples are used to provide information on precision of the data. Field duplicates are replicate samples collected and handled in the same manner at the same time for a given station. Field duplicates were collected at station 2016-11b3 for surface water and station 2016-7d for groundwater.

Results for field duplicates were examined to determine if precision DQOs were met. The DQO for field duplicate results in the current assessment was relative percent difference (RPD) less than 40% for groundwater and 60% for groundwater given the high variability of the matrix (CCME, 2016). Relative Percent Difference is calculated as:

$$\text{RPD} = (\text{Difference} / \text{Average}) \times 100$$

RPD greater than the acceptance criteria may be considered an indication of sample contamination or lack of sample representativeness. It should be noted that high variability may occur in field duplicates with high amount of sediment in the surface water sample.

## 4. Visual Monitoring Results

The visual monitoring component of the LTM program was partially completed on July 18, 19, and 21, 2023, with a full day at Camlaren on the 18, and partial days at the remaining sites. Field conditions in 2023 were dry, > 27° C, and smoky due to extreme wildfire activity. Due to poor field conditions, sites Murray Lake and Try Me were not inspected in July. The remaining sites were completed during the September program on September 29 and October 1, 2023. Visual monitoring results are presented in the **Visual Inspection Forms** in **Appendix D** with supporting **Photographic Log** in **Appendix C-1**.

Observations of significance are outlined in the following sections.

### 4.1.1 Backfilled / Covered Area Monitoring

Backfilled and covered areas identified for the Year 5 LTM were visually inspected for settlement, erosion and structural stability (e.g., deformation and cracking) where applicable.

Monitoring results identifying areas of concern are presented in **Table 4-1** below.

**Table 4-1. Observations of Significance Noted During Visual Inspection of Backfilled/Covered Areas**

Site Name	LTM Station	Hazard Category	Description	Photo No.	GPS Coordinates (UTM)	Change from Year 1
Kidney Pond	KID_SO_07	Impacted soil	Rills observed on slope approximately 0.5m wide x 0.15 m deep. Likely caused by overland flow. Evidence of former ponded water observed at base.	24	12V 381497E 6982775N	Yes

### 4.1.2 Mine Opening Monitoring

Closures of mine openings identified for the Year 5 LTM were visually assessed for settlement, erosion, and structural stability (e.g., deformation and cracking), where applicable.

Monitoring results identifying areas of concern are presented in **Table 4-2** below.

**Table 4-2. Observations of Significance Noted During Visual Inspection of Mine Openings**

Site Name	LTM Station	Hazard Category	Description	Photo No.	GPS Coordinates (UTM)	Change from Year 1
Burnt Island	Portal	Mine Opening	Deep depressions noted at top of backfilled area. Estimated > 0.3m deep x 1.5 m wide. Stability of backfilled area is adequate. Top of slope of the backfilled area should be closely monitored.	46	12V 390770E 6994470N	Yes
Goodrock	North Mine Shaft	Mine Opening	Shaft observed broken from the base.	3	12V 392125E 6990827N	Yes
Kidney Pond	Portal	Mine Opening	Rills approximately 0.5m wide x 0.15 m deep were noted on south side of the slope. Coarse grained material deposited in rills.	22	12V 381495E 6982792N	Unknown
West Bay	Open Pit	Mine opening	Fencing at the south end is slanted inward towards the pond at an approximate 45-degree angle. It can be walked on to enter the open pit. At the southwest edge of the fence is a 0.3 m gap at the bottom of the fence where it does not touch the ground. Animals and humans have access.	33, 39 – 43	12V 386674E 6978352N	Yes

#### 4.1.3 Moderate Risk Waste Rock Left in Place Monitoring

Moderate risk waste rock left in place was visually assessed. No signs of acid rock drainage (ARD) related impacts were observed therefore no soil or surface water samples were collected.

Other significant observations of note are outlined in **Table 4-3** below.

**Table 4-3. Observations of Significance Noted During Visual Inspection of Moderate Risk Waste Rock**

Site Name	LTM Station	Hazard Category	Description	Photo No.	GPS Coordinates (UTM)	Change from Year 1
Kidney Pond	KID_WR_01	Waste Rock	Cracks and settlement over covered material observed in areas to the west and south. Loose cover material to the south poses a hazard for walking on site. Loose material is not stable and settles approximately 0.4m when walked on.	23	12V 381564E 6982752N	Yes

## 5. TSCA Performance Results

### 5.1 Visual Inspection – 2023 July

The visual inspection of the TSCA was completed on July 18, 2023 by Janine Morris, B.Sc. of AECOM. Inspection of the TSCA noted areas of settlement, and erosion of varying degrees. The Geotechnical Inspection of the Camlaren Mine TSCA was completed in September and was submitted under separate letterhead. **Table 5-1** below summarizes the observations and supporting **Photographic Log** is presented in **Appendix C-2**.

**Table 5-1. Geotechnical Visual Inspection - July**

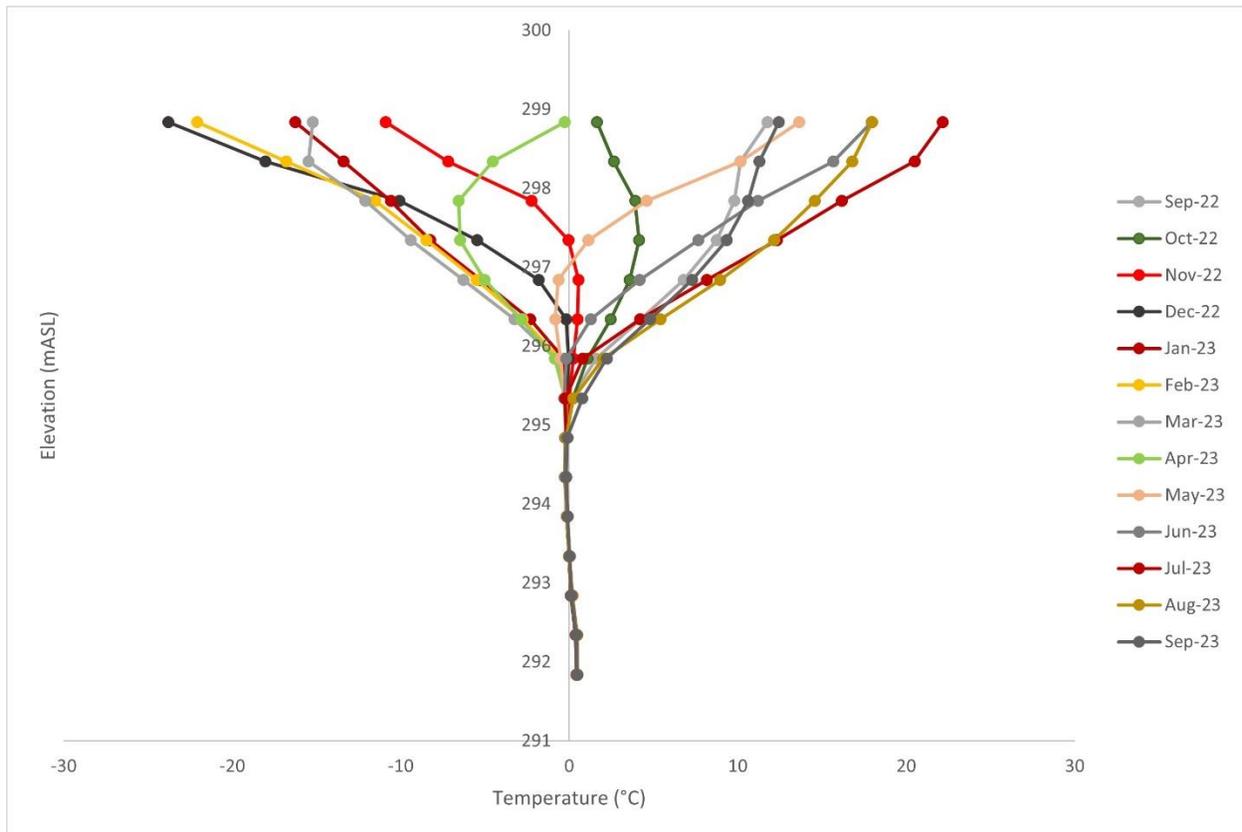

Hazard Type	Location (Approximate)	Description	Photo No.
Cracking	12V 388375E 6985973N	Cracking size approximately 0.08 m – 0.15 m in length	10
Erosion	12V 388383E 6986070N	Rills observed near base of slope with collection of fine grains.	14
Erosion	12V 388355E 6986112N	Minor rills observed on slope with transportation of fine-grained material.	16
Erosion	12V 388339E 6986122N	Minor – moderate erosion on slope with rills observed on slope.	17
Settlement	12V 388289E 6986121N – 12V 388264E 6986055N	Significant cracking due to settlement observed. Size range is approximately 1.5 m - 10 m in length.	21 - 25
Staining	12V 388262E 6986085N	Stained area of potential hydrocarbons by noted odour. Staining > 0.1 m deep.	26
Exposed geotextile	12V 388287E 6986080N	Exposed liner does not appear to have worsened from previous year.	27
Staining	12V 388268E 6986042N	Two small stains observed. Each approximately 0.3 m in length. Likely hydrocarbons from remedial activities.	29
Staining	12V 388246E 6986014N	Larger stain observed approximately 1 m x 0.5 m.	30
Staining	12V 388249E 6986004N	Significant stain observed approximately 1.5 m x 1 m.	31
Cracking	12V 388314E 6985954N	Cracking observed on top of TSCA at the south end.	33

**\*Note:** Staining observed in the Year 5 program was not noted in previous reports.

### 5.2 Thermistors

Data from the thermistors VT1 and VT2 was downloaded by AECOM on July 18, 2023 and October 1, 2023. Upon analysing the temperature data for the thermistors it was noted that measurements for thermistor VT1 only spanned from October 18, 2019 to September 18, 2022 after which no temperature measurements were collected. This could potentially indicate this sensor has malfunctioned, its physical connection to the datalogger has been disrupted, or the datalogger was not properly reset after the Year 4 data download. Unless this thermistor has been deliberately decommissioned, it is recommended that the sensor be inspected and repaired (if possible) or reset if further monitoring is required. No disruptions were observed at the VT2 location. The data downloaded for thermistor VT2 spanned from September 13, 2018 to October 1, 2023. The monthly average temperature profiles for VT2 during the period of September 1, 2022 to September 30, 2023 are shown below in **Figure 5-1**. Refer to Englobe’s Year 4 Long-Term Monitoring Report for profiles of Year 1 – Year 4.

**Figure 5-1. VT2 Year 4 – Year 5 Monthly Average Temperature Profiles**

Temperature data downloaded from VT2 indicated a range of temperatures from approximately -22°C during the winter season to 22°C during the summer season near the ground surface. The sub-surface temperatures indicated an active zone to 4 m below the ground surface (mbgs) or to elevation of 295 masl. Within the active zone the temperature profiles fluctuate seasonally but are gradual between the surface temperature and the constant temperature zone below 4 mbgs, where the temperature is at and/or near the freezing point. The 2023 profiles for VT2 match the historical LTM data for VT2.

### 5.3 Vibrating Wire Piezometers

Data from the six (6) VWP installed at the three (3) locations, VB1, VB2, and VB3, were downloaded by AECOM on July 18, 2023 and October 1, 2023.

The data downloaded spanned from September 14, 2018 to October 1, 2023 for all the VWPs except VW52117. The data for VW52117 spanned from September 14, 2018 to September 4, 2023, after which null values are recorded. This could potentially indicate that this sensor has malfunctioned or its physical connection to the datalogger has been disrupted. Unless it has been deliberately decommissioned, this sensor should be inspected and repaired (if possible) or replaced if further monitoring is required.

AECOM converted the raw piezometer readings, measured in B units, into pressure values (measured in kPa) using the following linear equation (Equation 1) below:

$$P = CF * (L_0 - L) - TK * (T_0 - T) + (S_0 - S)$$

Where:

P = pressure measured in kPa;

L<sub>0</sub> and L = the initial (installation) and current B readings, measured in B units;

T<sub>0</sub> and T = the initial (installation) and current temperature readings, measured in degrees Celsius; and,

S<sub>0</sub> and S = the initial (installation) and current barometric pressure readings, measured in kPa.

It should be noted that the barometric pressure data was not provided to AECOM, nor were the initial (installation) readings for L<sub>0</sub>, T<sub>0</sub> and S<sub>0</sub>. In the absence of barometric pressure data, the barometric pressure term in Equation 1 was omitted from the calculation. In the absence of the initial (installation) readings for L<sub>0</sub>, T<sub>0</sub> and S<sub>0</sub>, the shipped zero readings reported on the VWP calibration records were used in the calculation. The shipped zero readings were provided by Englobe by email correspondence on December 8, 2023 and are provided below in **Table 5-2**.

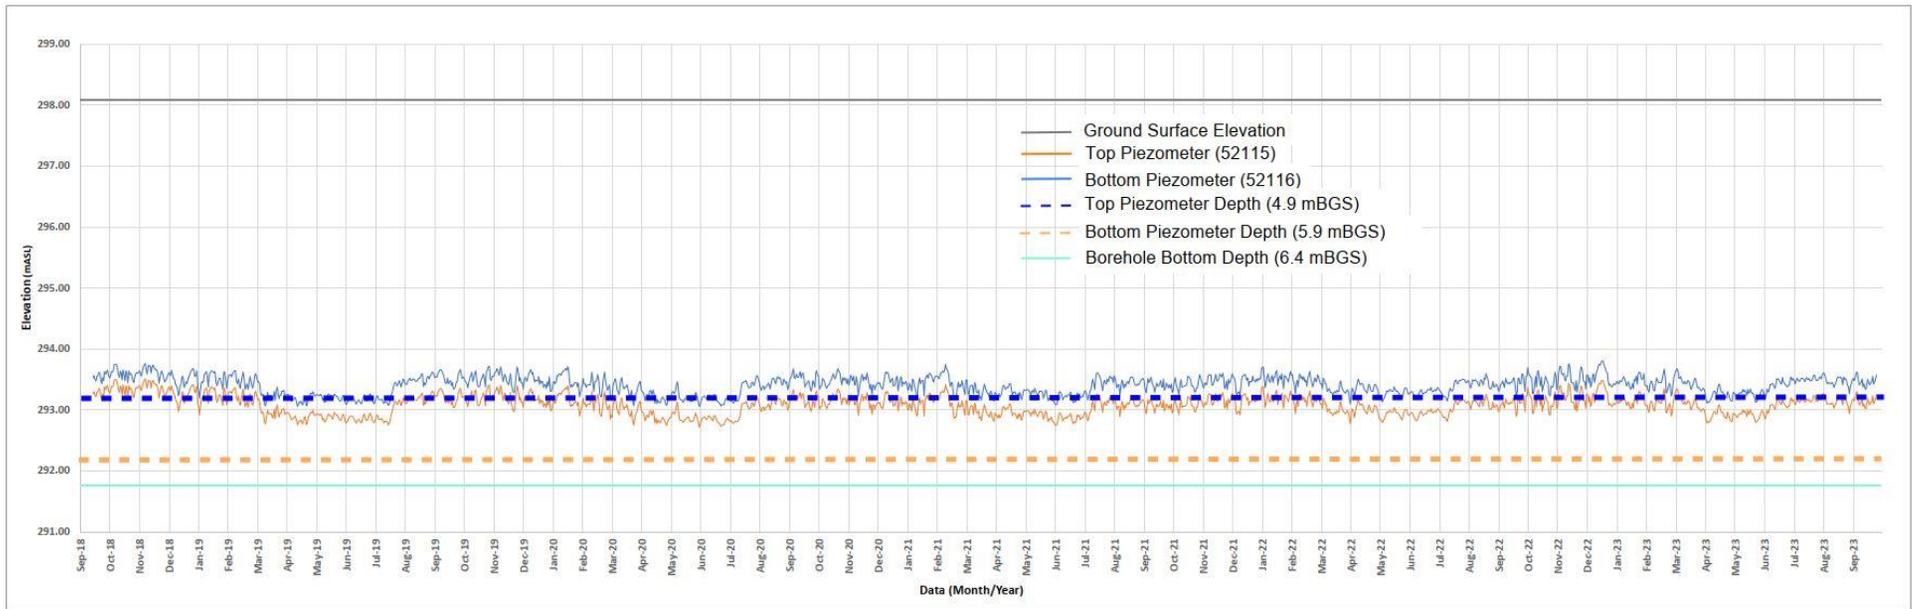

**Table 5-2: Shipped Zero Readings for Vibrating Wire Piezometers**

Location	VWP	Linear Calibration Factor - CF (kPa/B units)	Temperature Correction Factor - Tk (kPa/deg C)	Initial B Readings - L <sub>0</sub> (B units)	Initial Temperature Readings - T <sub>0</sub> (deg C)
VB1	VW52115	0.0943	0.0361	8749	23.3
	VW52116	0.0953	-0.0470	8911	23.3
VB2	VW52117	0.0956	-0.0535	8168	23.2
	VW52118	0.0973	0.0516	8734	23.3
VB3	VW52119	0.0948	-0.0147	8824	23.3
	VW52120	0.0931	-0.1040	8694	23.5

Once the raw piezometer readings were converted to pressure values, the equivalent height of a water column was calculated for each pressure value and added to the reported elevation of each VWP sensor. The result was a total head value for each data point. The total head values were plotted over time for each VWP pair, as presented in **Figures 5-2** through **Figure 5-4** below.

AECOM understands that two VWPs are installed in a nested configuration at each of the three VWP monitoring locations (VB1, VB2 and VB3). The purpose of the top piezometer is to measure the pore pressures in the tailings while the purpose of the bottom piezometer is to measure the pore pressures at the bottom of the borehole near the bedrock or native soil.

Figure 5-2: Piezometric Data (Total Head Elevation) for the VB1 Location

**Figure 5-3: Piezometric Data (Total Head Elevation) for the VB2 Location**

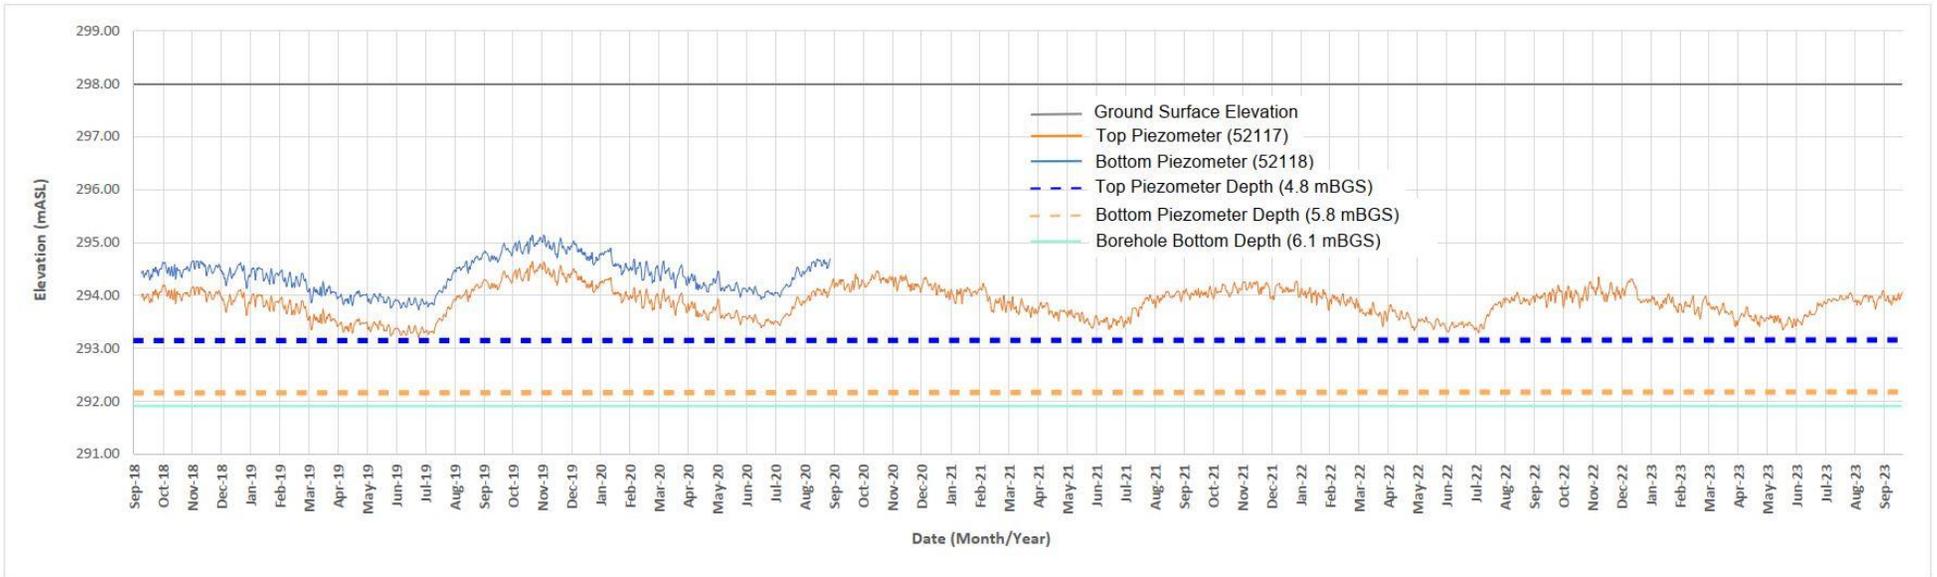

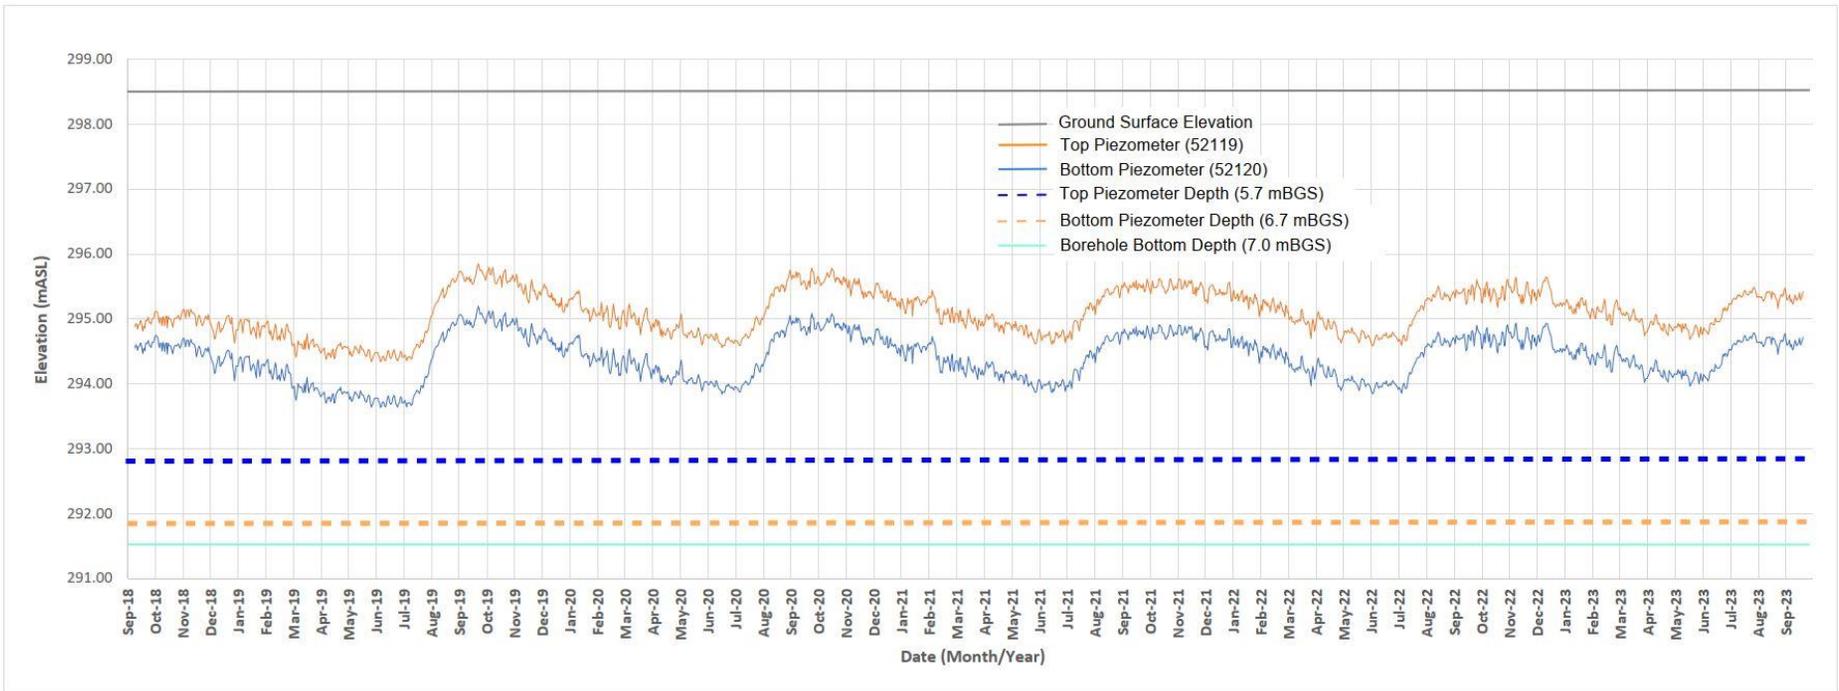

Figure 5-4: Piezometric Data (Total Head Elevation) for the VB3 Location

In general, the total head values computed by AECOM match those presented in the previous Year 3 and Year 4 LTM reports. Slight differences were observed between the total head values computed by Englobe in the Year 3 and Year 4 LTM reports for the VB3 location. The temporal trends of the data profiles appear to match reasonably well but there is an overlap of the VW52119 and VW52120 profiles between November 2018 and January 2019 seen in the Englobe Year 4 LTM report that is not observed in the profiles computed by AECOM. To maintain consistency between LTM reports, AECOM opted to use the linear equation to compute total head values. AECOM also conducted a sensitivity analysis on the shipped zero readings ( $L_0$ ,  $T_0$  and  $S_0$ ) for the two VB3 thermistor sensors used in the linear equation to determine a possible cause for the discrepancy. Through this sensitivity analysis it was concluded that the total head profiles are quite sensitive to changes in the initial readings for  $L_0$ ,  $T_0$  and  $S_0$  and that there may have been some human error which occurred during the preparation of the VB3 total head profiles in the Year 4 LTM report which resulted in the differences we see relative to the current total head profiles.

The piezometers at the three monitoring locations showed similar temporal trends to those reported in the previous Year 4 LTM report and the observed trends appear to continue unchanged throughout the latest monitoring period (September 6, 2022 to October 1, 2023). In general, the piezometric data for five seasons shows that the total head was lowest in the spring and summer (March to July) and highest in the late summer and winter (August to February).

At the VB1 and VB3 locations, a small upward gradient can be interpreted based on the total head difference between the top and bottom piezometers. At the VB2 location, a small downward gradient can be interpreted.

## 6. Surveillance Network Program (SNP) Results

### 6.1 Groundwater Monitoring

During the July program at Camlaren, groundwater monitoring and sampling was completed over two days, July 18 and 20, 2023. All six groundwater wells were monitored on July 18. MW2 was observed dry at the time of monitoring. MW1, MW3, and MW4 were sampled using a battery-operated peristaltic pump. The recharge rate was insufficient for sampling wells MW5 and MW6 and they were purged dry. MW6 was sampled on July 20 using a dedicated bailer and MW5 recharge was insufficient for a representative sample. Sampling locations are shown in **Figures 8** in **Appendix A** and in-situ measurements are summarized in **Table B-2** in **Appendix B**.

During the September program, groundwater monitoring and sampling was completed over two days, September 29 and October 1, 2023. All six groundwater wells were monitored on September 29. All groundwater wells sampled were collected using a battery-operated peristaltic pump. MW1, MW3, and MW4 were sampled on September 29, 2023. MW2 contained insufficient water for a representative sample and MW5 was not sampled due to insufficient water and lost sampling devices down the well. MW6 was purged dry on September 29, and sampled on October 1, 2023. The well contained insufficient water for a complete sample with its duplicate and a partial sample was collected, prioritizing metal analysis bottles.

A blockage was noted MW1 in monitoring Years 2 and 3, which has not been observed since. In monitoring Year 4, MW2 was determined to be blocked, which had been previously noted as dry in monitoring Years 2 and 3. Based on the borehole depth and recently recorded depth to bottom, AECOM determined MW2 blocked in Year 5. Though water levels may still be recorded, sampling of MW2 should not occur until the blockage has been inspected and it has been determined that the groundwater water is from within the TSCA and not surface water infiltration.

**Table 6-1. Year 5 LTM - 2023 Monitoring Well Measurements**

Monitoring Well ID	Surface Elevation (masl) <sup>1</sup>	Monitoring Well Pipe Stickup (m)	Depth of Well (mbp) <sup>2</sup>	Groundwater Depth		Groundwater Elevation (masl)	
				July	September	July	September
MW1	298.73	0.94	6.12	5.45	5.05	294.22	294.62
MW2	298.96	0.93	8.0 <sup>3</sup>	Dry	5.02	-	294.87
MW3	292.41	0.77	7.89	3.12	2.66	290.07	290.52
MW4	294.52	0.58	4.68	3.52	3.66	291.58	291.44
MW5	296.58	0.65	5.52	5.48	Dry	291.75	-
MW6	295.45	0.67	6.15	4.25	4.03	291.87	292.09

Notes:

1. metres above sea level
2. metres below top of pipe
3. depth taken from borehole logs. Added well stickup height for total depth.

Table 6-2 presents the groundwater elevations from Year 1 to Year 5 (present).

**Table 6-2. Groundwater Elevations 2018 - 2023**

Monitoring Date	Groundwater Elevations (masl)					
	MW1	MW2	MW3	MW4	MW5	MW6
Sept. 16, 2018	295.90	Dry	290.35	292.56	292.34	290.90
July 8 – 10, 2019	Blockage	293.37	291.07	292.85	292.82	294.15
Sept. 10 – 11, 2019	296.35	293.87	291.06	292.86	293.12	294.07
July 17, 2020	Blockage	293.61	291.25	293.35	293.05	294.16
Sept. 3, 2020	Blockage	293.94	291.17	292.95	292.60	294.12
June 18, 2021	Blockage	Blockage	291.10	292.23	292.54	293.71
Sept. 15, 2021	Blockage	Blockage	291.11	292.27	292.54	293.83
June 29, 2022	293.72	Blockage	291.12	292.14	292.76	293.90
Sept. 7, 2022	294.65	Blockage	291.01	292.03	293.08	293.54
July 18 – 20, 2023	294.22	Blockage	290.07	291.58	291.75	291.88
Sept 29, 2023	294.62	294.87 <sup>1</sup>	290.52	291.44	Dry	292.09

Note:

1. Groundwater recorded above suspected blockage.

### 6.1.1 Analytical

Detailed analytical results are summarized in **Table B-3 in Appendix B**. The groundwater analytical results were compared to the Tier 1 FIGQG for agriculture land use for coarse-grained soil types. Based on the laboratory groundwater analytical results, concentrations of the analysed chemical parameters were below the applicable guidelines and standards for all the submitted groundwater samples, with exceptions summarized below in **Table 6-3**.

**Table 6-3. Groundwater Analytical Result Exceedances**

Sampling Station	Date	Exceedances
MW1	July 18, 2023	Aluminum, Sulphate, Arsenic, Iron, Manganese, Zinc
	September 29, 2023	Aluminum, Sulphate, Arsenic, Iron, Manganese, Zinc
2016-7a (MW3)	July 18, 2023	Sulphate, Arsenic, Iron, Manganese
	September 29, 2023	Sulphate, Arsenic, Iron, Manganese, Uranium
2016-7b (MW4)	July 18, 2023	Sulphate, Arsenic, Iron, Manganese, Zinc
	September 29, 2023	Sulphate, Arsenic, Cadmium, Iron, Manganese, Zinc
2016-7d (MW6)	July 20, 2023	Aluminum, Sulphate, Arsenic, Cadmium, Iron, Manganese, Selenium, Silver, Zinc
	October 1, 2023	Sulphate, Nitrite, Selenium

Notes:

Red indicates exceedances in previous LTM report.

Results of the Year 5 analysis are generally consistent with previous monitoring years and exceedances in Year 5 were similar in Previous LTM reports. However, between 1 and 4 exceedances were observed in Year 5 which were not previously observed. Station 2016-7d reported the greatest increase of exceedances of cadmium, selenium, and silver. Silver may be anomalous as it did not exceed FIGQG guidelines in the duplicate sample. It is unknown at this time if there is an increasing trend for metal concentrations though it should be noted that 2023 experienced persistently dry conditions, decreasing water levels, which may have increased the overall metal concentrations.

## 6.2 Surface Water Monitoring

During the July program, the 18 surface water locations were monitored on July 18, 20, and 21, 2023. SNP Stations 2016-8 (discharge from TSCA) were observed dry and PIT1 and PIT 2 sampling locations were determined to be inaccessible.

During the September program, the 18 surface water locations were monitored on September 29, and October 1, 2023. SNP stations 2016-8 (discharge from TSCA) were observed dry. PIT1 and PIT 2 were removed from the scope of work by CIRNAC based on the observations in July. Sampling locations are shown in **Figure 2** through **Figure 26** in **Appendix A** and in-situ parameters are summarized in **Table B-1** of **Appendix B**.

## 6.3 Analytical

Detailed analytical results are summarized in **Table B-3** in **Appendix B**. The surface water analytical results were compared to the CCME CEQG FAL long-term guideline values. Based on the laboratory analytical results, concentrations of all the analysed chemical parameters were below the applicable guideline values and standards for all the submitted surface water samples, with exceptions summarized below in **Table 6-4**.

**Table 6-4. SNP - Surface Water Analytical Result Exceedances**

Sampling Station	Date	Exceedance
2016-11a	July 21, 2023	Ammonia, Copper
	September 29, 2023	Ammonia
2016-11b3	July 18, 2023	Aluminum
2016-11d	July 20, 2023	Ammonia, Aluminum, Arsenic, Iron, Copper

Notes:

- *Red* indicates exceedances in previous LTM reports.

Most SNP stations reported concentrations below the regulatory guidelines which is generally consistent with previous reporting years. Three stations, 2016-11a, 2016-11b3 and 2016-11d reported exceedances ranging between 1 – 5 parameters per station. The majority of exceedances were reported in previous Years with the exception of ammonia and copper at 2016-11a and copper at 2016-11d. Field observations note high suspended plant life in various states of decomposition within the bay sampled, which may explain the increased ammonia concentration.

Total suspended solids (TSS) was analyzed to assess potential erosion risk of the backfilled remedial excavation areas. A summary of TSS results from Years 1 through 5 are presented below in Table 6-5.

**Table 6-5. Summary of Year 1 through Year 5 LTM TSS Results**

Sampling Point	Total Suspended Solids Concentrations (mg/L)									
	Year 1 July	Year 2 July	Year 3 June	Year 4 June	Year 5 July	Year 1 Sept.	Year 2 Sept.	Year 3 Sept.	Year 4 Sept.	Year 5 Sept.
SNP2016-11a_SW	10	1.7	12.0	6.0	1	1.3	7.3	10.0	8.0	<0.96
SNP2016-11b1_SW	160	<1.0	6.0	<3.0	<0.99	7.3	<1.0	6.0	<3.0	<1.0
SNP2016-11b2_SW	5.3	<1.0	12.0	<3.0	<1.0	1.3	<1.0	10.0	<3.0	<0.99
SNP2016-11b3_SW	4.7	<1.0	26.0	<3.0	3.1	2.0	<1.0	10.0	<3.0	5.9
SNP2016-11b4_SW	2.0	<1.0	8.0	<3.0	<1.0	1.3	<1.0	6.0	<3.0	<0.96
SNP2016-11c_SW	11.0	<1.0	<3	<3.0	<1.0	2.0	<1.0	14.0	<3.0	<1.0
SNP2016-11d_SW	5.3	8.9	12.0	38	210	10	2.3	150.0	6.0	1.3
SNP2016-11e_SW	<1.0	<1.0	6.0	<3.0	1.4	1.3	1.4	18.0	<3.0	1.8
SNP2016-11f_SW	1.3	<1.0	10.0	<3.0	<1.0	2.7	1.4	12.0	6.0	<1.0
SNP2016-8a_SW	Not collected during Years 1 through 5 (Dry)									
SNP2016-8b_SW	Not collected during Years 1 through 5 (Dry)									

Overall, TSS concentrations are generally decreasing when compared to LTM Years 1 through 4 in the majority of sampling stations. Some stations record an increase in TSS concentration, however when compared to the next sampling event, either September of that year, or June/July of the following year, the increase of concentration does not persist. Erosion from backfilled remedial excavations is not observed at this time.

## 6.4 Surface Water Sampling – West Bay

Complete analytical results of surface water samples in West Bay are presented in Table B-6 in Appendix B. The surface water analytical results were compared to the CCME CEQG FAL long-term guideline values. Based on the laboratory analytical results, concentrations of all the analysed chemical parameters were below the applicable guideline values and standards for all the submitted surface water samples, with exceptions summarized below in **Table 6-6**.

**Table 6-6. Surface Water Analytical Result Exceedances – West Bay**

Sampling Station	Date	Parameter Exceedance
WET 1	July 21, 2023	Ammonia
	October 1, 2023	Copper
WET2	July 21, 2023	Ammonia, <b>Iron</b>
GL1	October 1, 2023	Lab pH
GL2	October 1, 2023	Lab pH
GL3	October 1, 2023	Lab pH

**Notes:**

- **Red** indicates exceedances in previous LTM reports.

Apart from the parameter exceedances listed in Table 7-1, samples collected at West Bay surface water stations reported concentrations below the regulatory guidelines, which is generally consistent with the previous report in Year 1 (Stantec 2020). Ammonia was reported as an exceedance at WET1 and WET2, which was not previously reported, though it should be noted the high TDS values during months that exceedances occur. Field observations note plant life in various decomposing stages which may result in increased ammonia concentrations. An exceedance of copper was reported at WET1, which has not been

previously reported. An exceedance in iron was reported at WET2, which was previously reported in Year 1. GL1, GL2, and GL3 were outside the pH criteria in October for the laboratory reported results, which was not previously reported. It should be noted the laboratory hold time for pH is 15 minutes and was exceeded, and the respective in field observations were within acceptable ranges, with values of 7.31 to 8.03.

## 6.5 QA/QC

Two duplicate samples were collected for QA/QC purposes in both July and September programs and analyzed for the relevant parameters. Stations 2016-11b3 was sampled with a duplicate for surface water and 2016-7d was sampled with a duplicate for groundwater. RPD was calculated for all duplicate samples and results were considered acceptable if the RPD was less than 40% for groundwater and 60% for surface water. Calculated RPD are presented in Table B-5 in Appendix B.

The calculated RPD generally remain below the alert criteria. Surface water exceeded the alert criteria for nitrate, nitrite, TSS, phosphorous, copper, and zinc in one or both sampling events. Groundwater exceeded the alert criteria for several metals, nitrite and TSS in one or both sampling events. Overall, these results do not affect the interpretation of the data for the site.

## 7. Summative Results and Conclusions

The Year 5 LTM program was completed on July 18, 20, and 21 and September 29 and October 1 2023.

### TSCA Performance

Results of the Year 5 monitoring of thermistor VT2 indicate generally consistent results to previous Years; however, it was noted that temperature data collection at the VT1 location has been disrupted and data after September 18, 2022 has not been collected. Unless the VT1 sensor has been deliberately decommissioned, it is recommended that this sensor be inspected and repaired or replaced if further monitoring is required.

Results of the Year 5 monitoring of the vibrating wire piezometer locations VB1, VB2 and VB3 indicate generally consistent results to previous Years; however, it was noted that data collection for VW52117 at the VB2 location has been disrupted and data after September 4, 2020 has not been collected. This data collection disruption for VW52117 has been noted in the previous Year 3 and Year 4 LTM reports. Unless the VW52117 sensor has been deliberately decommissioned, it is recommended that this sensor be inspected and repaired or replaced if further monitoring is required.

It was also noted that there is a discrepancy between the Year 4 and Year 5 total head profiles at the VB3 location. Through sensitivity analysis of the initial readings for  $L_0$ ,  $T_0$  and  $S_0$  it was concluded that possible human error during the preparation of the Year 4 profiles was responsible for the discrepancy.

### SNP Monitoring and West Bay Sampling

The results of the SNP groundwater and surface water monitoring indicate generally consistent results to previous Years. However, between 1 - 4 exceedances in total metals were reported in Year 5 which were not reported previously for groundwater stations. Surface water results at SNP stations were generally consistent with previous monitoring Years with the exception of ammonia at station 2016-11a, which exceeded in both sampling events and copper at 2016-11a and 2016-11d in July and September respectively. Results from West Bay remain consistent to previous Years with the exception of ammonia during the July program and copper exceeding at WET1 during the September program.

It is unknown at this time if there is an increasing trend in metal concentrations, however it should be noted that 2023 experienced persistently dry conditions and decreasing water levels, which may have increased the overall metal concentrations. Increased ammonia is not a concern at this time as field observation note various states of plant decomposition in several sampling locations.

### Visual Inspections of Geotechnically Engineered Areas

Visually inspected areas were generally in good condition. The following areas require further observation or repair:

- Camlaren – Impacted soil areas CAM\_SO\_04, CAM\_SO\_06, and CAM\_SO\_07: stained soil in four separate locations. One location exhibited faint hydrocarbon odour.
- Camlaren – The aluminum debris pile located north of the TSCA should continue to be monitored for any changes in Year 6.
- Kidney Pond - Impacted soil area KID\_SO\_07: areas of settling likely caused by ponding water.
- Kidney Pond – Portal: Rills observed on south side of slope. Unknown if worsening from previous Years.
- Kidney Pond – Waste Rock KID\_WR\_01: cracks and settlement over covered material. Loose material is not stable and settles approximately 0.4 m deep posing a walking hazard to animals and humans.
- Burnt Island – Portal: deep depressions at top of backfilled area. Top of slope should be closely monitored.

- Goodrock – North Mine Shaft: Shaft observed broken from the base.
- West Bay – Open Pit: Barricades are not performing adequately. A gap remains at the south side of the fence and the southeast side has collapsed at the top, allowing access to the pit by animals and humans.

## 8. Recommendations

AECOM recommends the following from the Year 5 LTM Program:

- AECOM recommends allocating one contingency day into the program for delays out of the field team's control e.g., weather, visibility etc.
- In Year 6, a portable borehole camera should be brought to MW 2 to inspect the assumed blockage.
- VT2 needs to be inspected for the cause of data recording cancellation. Replacement batteries should be brought to site as well as a laptop with the appropriate program to further troubleshoot if necessary. The individual performing this inspection should be familiar with the DT Logger Host software.
- All dataloggers should be cleared of old data, replace batteries as needed, and re-launched to read/record data at the appropriate intervals so the loggers are not full before the next monitoring event.
- For detailed inspection of geotechnically engineered structures at the various sites, trees should be cleared for helicopter landing pads at Kidney Pond (KID\_WR\_04), Murray Lake, and Try Me.
- Continuing from Year 4 recommendations, data for VWP 52117 – top piezometers at VB2 location spanned from September 14, 2018 to September 4, 2020, after which null values are recorded. This potentially indicate this sensor has malfunctioned or its physical connection to the datalogger has been disrupted. Unless it has been deliberately decommissioned, this sensor should be inspected and repaired or replaced if further monitoring is required.
- Upon analysing the temperature data for thermistors VT1 and VT2 it was noted that measurements for thermistor VT1 only spanned from October 18, 2019 to September 18, 2022 after which no temperature measurements were collected. This could potentially indicate this sensor has malfunctioned, its physical connection to the datalogger has been disrupted, or the datalogger was not properly reset after the Year 4 data download. Unless this thermistor has been deliberately decommissioned, it is recommended that the sensor be inspected and repaired or reset if further monitoring is required.
- Camlaren – Impacted soil areas CAM\_SO\_04, CAM\_SO\_06, and CAM\_SO\_07: stained soil in four separate locations. One location exhibited faint hydrocarbon odour. It is suggested that during the Year 6 monitoring program that stained soiled is excavated with a shovel, and the excavated soil removed from site in 5 gallon pails. A confirmatory sample should be taken at each location following removal of the soil and analyzed for PHCs and BTEX. Areas should continue to be observed in Year 6 onward.
- Camlaren – The aluminum debris pile observed on the north side of the TSCA should continue to be observed for any change in the Year 6 monitoring.
- The Year 5 Long Term Monitoring Performance Assessment Report should be completed to evaluate any other recommendations or changes to the program for Phase II.

## Photographic Log

C-1 Geotechnical Inspection and Site Visit

C-2 TSCA Performance

C-1 Geotechnical Inspection and Site Visit

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>1</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> Northeast	
<b>Description</b> South end of Camlaren. CAM_SO_08.	

<b>Photo No.</b> <b>2</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> South end of Camlaren. CAM_SO_08.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Camlaren + Zenith Island	<b>Project No.</b> 60710609
--	--	--------------------------------

<b>Photo No.</b> <b>3</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> Southwest	
<b>Description</b> Southwest end of Camlaren. CAM_SO_12.	

<b>Photo No.</b> <b>4</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> Southeast	
<b>Description</b> Southwest end of Camlaren. CAM_SO_12.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Camlaren + Zenith Island	<b>Project No.</b> 60710609
--	--	--------------------------------

<b>Photo No.</b> <b>5</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> CAM_SO_04 area close to TSCA.	

<b>Photo No.</b> <b>6</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> CAM_SO_04 area close to TSCA.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>7</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> CAM_SO_07 area in background. Observed staining in foreground (in CAM_SO_06) likely from remediation activities.	

<b>Photo No.</b> <b>8</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> CAM_SO_06 in background.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>9</b>	<b>Date</b> 10/1/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> CAM_SO_01 in background.	

<b>Photo No.</b> <b>10</b>	<b>Date</b> 10/1/2023
<b>Direction Photo Taken</b> N/A	
<b>Description</b> Fox holes to northwest of CAM_SO_01.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>11</b>	<b>Date</b> 10/1/2023
<b>Direction Photo Taken</b> Northeast	
<b>Description</b> CAM_SO_14.	

<b>Photo No.</b> <b>12</b>	<b>Date</b> 10/1/2023
<b>Direction Photo Taken</b> Southeast	
<b>Description</b> CAM_SO_14 in background.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>13</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> North side of TSCA near MW3, observed aluminum debris pile.	

<b>Photo No.</b> <b>14</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Zenith Island excavation backfill material. Observed upslope.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Camlaren + Zenith Island	<b>Project No.</b> 60710609
--	--	--------------------------------

<b>Photo No.</b> <b>15</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Zenith Island excavation backfill material. Observed downslope.	

<b>Photo No.</b> <b>16</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> Northeast	
<b>Description</b> Zenith Island excavation backfill material.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Camlaren + Zenith Island	<b>Project No.:</b> 60710609
--	---	---------------------------------

<b>Photo No.</b> <b>17</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Aerial view of Southwest end of Camlaren.	

<b>Photo No.</b> <b>18</b>	<b>Date</b> 7/18/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> North side of Camlaren TSCA.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Kidney Pond	<b>Project No.</b> 60710609
--	-------------------------------------	--------------------------------

<b>Photo No.</b> <b>19</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> West	
<b>Description</b> KID_SO_11 in foreground. Revegetation and observed former ponded water.	

<b>Photo No.</b> <b>20</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> KID_SO_10. Observed cracking from settlement.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Kidney Pond	<b>Project No.</b> 60710609
--	-------------------------------------	--------------------------------

<b>Photo No.</b> <b>21</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> West	
<b>Description</b> KID_SO_10. Revegetation observed.	

<b>Photo No.</b> <b>22</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Backfilled portal. Evidence of erosion observed. Revegetation at base of slope and within formed rills and top of slope.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Kidney Pond	<b>Project No.:</b> 60710609
--	--------------------------------------	---------------------------------

<b>Photo No.</b> <b>23</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Southeast	
<b>Description</b> KID_WR_01: area of settled cover material in southeast side.	

<b>Photo No.</b> <b>24</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> North side of KID_WR_01 area, at base of KID_SO_07. Rills observed upslope.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Kidney Pond	<b>Project No.:</b> 60710609
--	--------------------------------------	---------------------------------

<b>Photo No.</b> <b>25</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> East KID_WR_03.	

<b>Photo No.</b> <b>26</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Southwest	
<b>Description</b> Aerial observation of KID_WR_04.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Kidney Pond	<b>Project No.</b> 60710609
--	-------------------------------------	--------------------------------

<b>Photo No.</b> <b>27</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Southwest	
<b>Description</b> Aerial observations downslope of KID_WR_04.	

<b>Photo No.</b> <b>28</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> Surface water sampling location at Kidney Pond.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Treacy	<b>Project No.:</b> 60710609
--	---------------------------------	---------------------------------

<b>Photo No.</b> <b>29</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> Aerial view of Treacy	

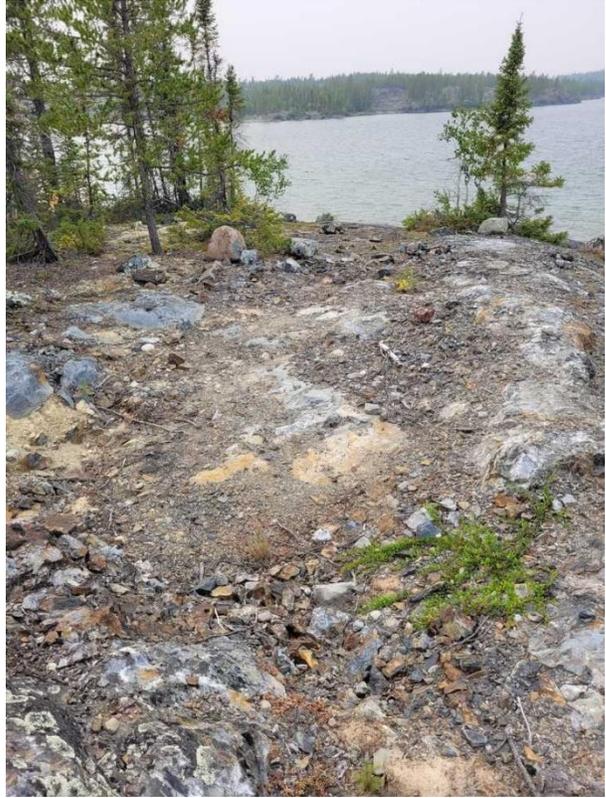

<b>Photo No.</b> <b>30</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Backfilled east trench. Observed upslope.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Treacy	<b>Project No.</b> 60710609
--	--------------------------------	--------------------------------

<b>Photo No.</b> <b>31</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Backfilled west trench. Observed downslope.	

<b>Photo No.</b> <b>32</b>	<b>Date</b> 7/20/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> TRE_SO_02 area in background. Revegetation observed.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> West Bay	<b>Project No.</b> 60710609
--	----------------------------------	--------------------------------

<b>Photo No.</b> <b>33</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Aerial view of Open pit and waste rock pile 1.	

<b>Photo No.</b> <b>34</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Southeast	
<b>Description</b> Shoreline at south pond	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> West Bay	<b>Project No.:</b> 60710609
--	-----------------------------------	---------------------------------

<b>Photo No.</b> <b>35</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northeast	
<b>Description</b> Southeast slope of waste rock pile 2.	

<b>Photo No.</b> <b>36</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Southwest slope of Waste rock pile 2.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> West Bay	<b>Project No.:</b> 60710609
--	-----------------------------------	---------------------------------

<b>Photo No.</b> <b>37</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northeast	
<b>Description</b> Evidence of previous ponded water on northeast edge of WR02.	

<b>Photo No.</b> <b>38</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Southeast	
<b>Description</b> Topographic low between waste rock piles 1 and 2. Evidence of ponded water and overland flow to the south.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> West Bay	<b>Project No.:</b> 60710609
--	-----------------------------------	---------------------------------

<b>Photo No.</b> <b>39</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Fence collapsing inwards at southern end of fence line.	

<b>Photo No.</b> <b>40</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Fence bowing towards the open pit.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> West Bay	<b>Project No.:</b> 60710609
--	-----------------------------------	---------------------------------

<b>Photo No.</b> <b>41</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> Barrier signage observed on west side.	

<b>Photo No.</b> <b>42</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> Barrier signage observed on north side.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> West Bay	<b>Project No.:</b> 60710609
--	-----------------------------------	---------------------------------

<b>Photo No.</b> <b>43</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> Observed 0.3 m gap at bottom of fence where it does not touch the ground. Animals and humans have access to open pit.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Burnt Island	<b>Project No.</b> 60710609
--	--------------------------------------	--------------------------------

<b>Photo No.</b> <b>44</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Burnt Island aerial view.	

<b>Photo No.</b> <b>45</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> East	
<b>Description</b> SNP station 2016-11a.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location</b> Burnt Island	<b>Project No.</b> 60710609
--	--------------------------------------	--------------------------------

<b>Photo No.</b> <b>46</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Backfilled portal.	

<b>Photo No.</b> <b>47</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Top of Waste rock area.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Burnt Island	<b>Project No.:</b> 60710609
--	---------------------------------------	---------------------------------

<b>Photo No.</b> <b>48</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> South	
<b>Description</b> Top of waste rock area looking downslope of south slope.	

<b>Photo No.</b> <b>49</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> North	
<b>Description</b> Mine opening shaft and backfilled area.	

<b>Site Name:</b> Gordon Lake Group Sites	<b>Site Location:</b> Burnt Island	<b>Project No.:</b> 60710609
--	---------------------------------------	---------------------------------

<b>Photo No.</b> <b>50</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> South-Southwest	
<b>Description</b> South end of covered tailings area.	

<b>Photo No.</b> <b>51</b>	<b>Date</b> 7/21/2023
<b>Direction Photo Taken</b> Northwest	
<b>Description</b> Central area of covered tailings area.

**Description**  
MW-6 in good condition.

# Appendix **D**

## Inspection Forms

**Visual Monitoring and Inspection Form**

Project Details			
Date:	21-Jul-23	Time:	15:30
Weather:	27 degrees. Sun and cloud with significant smoke		
Rainfall in last 24 hours?	No	Inspected by:	Janine Morris
Burnt Island			
Backfilled Excavation Locations			
LTM Station	Portal	Tailings	Mine Shaft
GPS Coordinates (12V)	390770E 6994470N	390463E 6994482N	390630E 6994509N
Animal Burrows	None Observed	None Observed	None Observed
Seepage / staining	No signs of staining downslope of backfilled area.	Some areas with minor topographic lows with evidence of ponded water by sorting of fine grains	None Observed
Signs of settlement	Deep pockets noted at top of backfilled area. Estimated > 0.3m deep x 1.5 m wide. Field crew did not walk up slope. Noted from helicopter.	Minor topographic lows noted on SW, NE and central areas of tailings cover where vegetation has regrown	No signs of cracking or significantly uneven topography
Drainage	Evidence of drainage to the SE as noted by fine and coarse grain sorting	Evidence of surface runoff to the SSE by evidence of natural grain sorting. Coarse grains settle in minor rills formed.	No signs of rills forming or active water movement
Vegetation re-establishment and percentage cover	< 5% revegetation of slope. Spruce, grasses, unidentified shrub.	Significant regrowth in NE areas of tailings where branch cover was placed. Fireweed, willow and spruce. 5 - 10% vegetation regrowth on areas not promoting revegetation. Grasses, willow, spruce, and fireweed.	Some vegetation regrowth. Fireweed and grasses growing in backfilled area.
Mine opening stability	N/A	N/A	Cap appears stable with no signs of cap uncovering
Other	Stability of backfilled area is adequate. Top of slope of the backfilled area should be closely monitored	N/A	N/A
General Condition of Backfilled Excavation (circle)	<b>GOOD / POOR</b>	<b>GOOD / POOR</b>	<b>GOOD / POOR</b>

Waste Rock Locations				
LTM Station	KID_WR_01	KID_WR_03	KID_WR_04	
GPS Coordinates (Easting / Northing)	381564E 6982752N	381600E 6982707N	382478E 6982328N	
Seepage / staining	No evidence of staining. Cracks and settlement over covered material observed in areas to the west and south. Loose cover material to the south poses a hazard for walking on site. Loose material is not stable and settles approximately 0.4m when walked on.	No staining observed downgradient of waste rock pile.	Evidence of ponded water on north side of excavation	
Drainage (ARD)	No signs of discolouration on or around site.	Overland flow gradient to the west into Kidney Pond.	No evidence of staining downgradient of excavated waste rock pile	
Vegetation re-establishment and percentage cover	<1% vegetation cover. Observed paper birch and grasses across the main site. The perimeter shows better regrowth with fireweed, willow, grasses, and spruce.	lichen and paper birch sapling growth on waste rock pile	No evidence of regrowth in excavated area.	
Vegetation stress	No signs of vegetation stress.	No signs of vegetation stress downgradient. Thick vegetation near Kidney pond.	No change in vegetation downgradient of waste rock excavation.	
Other	N/A	N/A	Inspection completed by air

Rainfall in last 24 hours?	No	Inspected by:	Janine Morris	
Treacy				
Backfilled Excavation Locations				
LTM Station	TRE_SO_01	TRE_SO_02	East Trench	West Trench
GPS Coordinates (12V)		381398E 6981185N	381397E 6981166N	381370E 6981168N
Animal Burrows	None observed	None observed	None observed	None observed
Seepage / staining	No staining observed	No staining observed	No staining observed	No staining observed
Signs of settlement	None Observed	None Observed	Topographic low observed within backfilled areas where revegetation assistance was placed. Approximately 0.15 m lower than surrounding area	None observed
Drainage	Backfilled area appears relatively flat.	Backfilled area appears relatively flat with some topographic lows to the north.	Natural drainage would be to the east-southeast. Within this trench pooling is likely to occur in the topographic low at the alder bush.	Coarse grained material and debris accumulating downslope towards Gordon Lake to the NW. Would likely protect fine grained material from entering water body.
Vegetation re-establishment and percentage cover	Grasses and kinnikinnick observed around edge of backfilled area.	Alder, paper birch, and grasses observed. <10% coverage.	Alder bush observed within backfilled trench. Grasses revegetating along the edge.	None observed within backfilled trench. Paper birch sapling observed adjacent to trench on north side and one Kinnikinnick bush upgradient.

**Remarks:**

Bureau Veritas is accredited to ISO/IEC 17025:2017 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as ASTM, CGSB, EN, GPA and/or SM. If not provided with the results, identification of the reference method or Bureau Veritas SOP is available upon request.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of the samples provided by the Client using the testing methodology referenced in this report.

Measurement Uncertainty has not been accounted for when stating conformity to any referenced standard. Interpretation and use of the test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. When sampling is not conducted by Bureau Veritas, results apply only to the sample(s) as received. Bureau Veritas is not responsible for the accuracy or any data impacts that result from the information provided by the customer or on the clients behalf by their agent.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Calgary, 4000 - 19 St. , Calgary, AB, T2E 6P8
- (2) Silica gel clean up employed.
- (3) Dissolved > Total Imbalance: When applicable, Dissolved and Total results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (4) The CCME method requires pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the CCME holding time. Bureau Veritas endeavours to analyze samples as soon as possible after receipt.
- (5) Orthophosphate > Total Phosphorus Imbalance: When applicable, Orthophosphate, Total Phosphorus and dissolved Phosphorus results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (6) TOC present in the sample should be considered as non-purgeable TOC.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	9.3°C
Package 2	7.7°C

Sample BVA363 [GLG-2023-00001-007] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA364 [GLG-2023-00001-008] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA365 [GLG-2023-00001-009] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA366 [GLG-2023-00001-010] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA367 [GLG-2023-00001-011] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA368 [GLG-2023-00001-012] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA369 [GLG-2023-00001-020] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA370 [GLG-2023-00001-001] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVA371 [GLG-2023-00001-002] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

#### ELEMENTS BY ATOMIC SPECTROSCOPY (GRAB WATER) Comments

Sample BVA369 [GLG-2023-00001-020] Elements by CRC ICPMS (total): Due to the sample matrix, sample required dilution. Detection limit was adjusted accordingly.

Sample BVA370 [GLG-2023-00001-001] Elements by CRC ICPMS (total): Due to the sample matrix, sample required dilution. Detection limit was adjusted accordingly.

Sample BVA371 [GLG-2023-00001-002] Elements by CRC ICPMS (total): Due to the sample matrix, sample required dilution. Detection limit was adjusted accordingly.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

**Remarks:**

Bureau Veritas is accredited to ISO/IEC 17025:2017 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as ASTM, CGSB, EN, GPA and/or SM. If not provided with the results, identification of the reference method or Bureau Veritas SOP is available upon request.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of the samples provided by the Client using the testing methodology referenced in this report.

Measurement Uncertainty has not been accounted for when stating conformity to any referenced standard. Interpretation and use of the test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. When sampling is not conducted by Bureau Veritas, results apply only to the sample(s) as received. Bureau Veritas is not responsible for the accuracy or any data impacts that result from the information provided by the customer or on the clients behalf by their agent.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Calgary, 4000 - 19 St. , Calgary, AB, T2E 6P8
- (2) Silica gel clean up employed.
- (3) Dissolved > Total Imbalance: When applicable, Dissolved and Total results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (4) The CCME method requires pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the CCME holding time. Bureau Veritas endeavours to analyze samples as soon as possible after receipt.
- (5) Orthophosphate > Total Phosphorus Imbalance: When applicable, Orthophosphate, Total Phosphorus and dissolved Phosphorus results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (6) TOC present in the sample should be considered as non-purgeable TOC.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	9.0°C
-----------	-------

Sample BVE350 [GLG-2023-00001-004] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVE351 [GLG-2023-00001-005] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVE352 [GLG-2023-00001-013] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVE353 [GLG-2023-00001-014] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

**Remarks:**

Bureau Veritas is accredited to ISO/IEC 17025:2017 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as ASTM, CGSB, EN, GPA and/or SM. If not provided with the results, identification of the reference method or Bureau Veritas SOP is available upon request.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of the samples provided by the Client using the testing methodology referenced in this report.

Measurement Uncertainty has not been accounted for when stating conformity to any referenced standard. Interpretation and use of the test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. When sampling is not conducted by Bureau Veritas, results apply only to the sample(s) as received. Bureau Veritas is not responsible for the accuracy or any data impacts that result from the information provided by the customer or on the clients behalf by their agent.

**CERTIFICATE OF ANALYSIS**

**BUREAU VERITAS JOB #: C356052**

**Received: 2023/07/22, 08:30**

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Bureau Veritas Calgary, 4000 - 19 St. , Calgary, AB, T2E 6P8

(2) Silica gel clean up employed.

(3) Dissolved > Total Imbalance: When applicable, Dissolved and Total results were reviewed and data quality meets acceptable levels unless otherwise noted.

(4) The CCME method requires pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the CCME holding time. Bureau Veritas endeavours to analyze samples as soon as possible after receipt.

(5) Orthophosphate > Total Phosphorus Imbalance: When applicable, Orthophosphate, Total Phosphorus and dissolved Phosphorus results were reviewed and data quality meets acceptable levels unless otherwise noted.

(6) TOC present in the sample should be considered as non-purgeable TOC.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	7.7°C
Package 2	6.3°C

Sample BVG418 [GLG-2023-00001-006] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG419 [GLG-2023-00001-015] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG420 [GLG-2023-00001-024] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG421 [GLG-2023-00001-025] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG422 [GLG-2023-00001-026] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG423 [GLG-2023-00001-027] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for NO2 (N); NO2 (N) + NO3 (N) in Water. Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample BVG424 [GLG-2023-00001-028] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

Sample BVG425 [GLG-2023-00001-019] : Orthophosphate by Konelab completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes.

#### RESULTS OF CHEMICAL ANALYSES OF SURFACE WATER Comments

Method Blank Alkalinity @25C (pp, total), CO3,HCO3,OH: CCB above criteria. Data inspected. All data < RDL or greater than 10x CCB.

Sample BVG423 [GLG-2023-00001-027] NO2 (N); NO2 (N) + NO3 (N) in Water: Sample was originally processed within hold time. Data quality required investigation. Re-analysis was completed past recommended hold time.

**Results relate only to the items tested.**

### QUALITY ASSURANCE REPORT(CONT'D)

QA/QC	Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
	B054423	AFI	RPD [BVG425-08]	Total Ammonia (N)	2023/07/31	NC		%	20
<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference &lt;= 2x RDL).</p> <p>(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.</p> <p>(2) Detection limits raised due to matrix interference.</p>

**Remarks:**

Bureau Veritas is accredited to ISO/IEC 17025:2017 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as ASTM, CGSB, EN, GPA and/or SM. If not provided with the results, identification of the reference method or Bureau Veritas SOP is available upon request.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of the samples provided by the Client using the testing methodology referenced in this report.

Measurement Uncertainty has not been accounted for when stating conformity to any referenced standard. Interpretation and use of the test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. When sampling is not conducted by Bureau Veritas, results apply only to the sample(s) as received. Bureau Veritas is not responsible for the accuracy or any data impacts that result from the information provided by the customer or on the clients behalf by their agent.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

**Report Date: 2023/10/24**  
Report #: R3415340  
Version: 2 - Revision

**CERTIFICATE OF ANALYSIS – REVISED REPORT**

**BUREAU VERITAS JOB #: C379188**

**Received: 2023/09/30, 09:00**

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Calgary, 4000 - 19 St. , Calgary, AB, T2E 6P8
- (2) Silica gel clean up employed.
- (3) Dissolved > Total Imbalance: When applicable, Dissolved and Total results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (4) The CCME method requires pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the CCME holding time. Bureau Veritas endeavours to analyze samples as soon as possible after receipt.
- (5) Orthophosphate > Total Phosphorus Imbalance: When applicable, Orthophosphate, Total Phosphorus and dissolved Phosphorus results were reviewed and data quality meets acceptable levels unless otherwise noted.
- (6) TOC present in the sample should be considered as non-purgeable TOC.

**Encryption Key**

Please direct all questions regarding this Certificate of Analysis to:

Parminder Virk, Key Account Specialist  
Email: Parminder.Virk@bureauveritas.com  
Phone# (403)735-2235

=====

Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Scott Cantwell, General Manager responsible for Alberta Environmental laboratory operations.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	7.0°C
Package 2	6.0°C

Version 2: Report re-issued to provide results for parameters requested on the original Chain of custody. Results for TSS on all samples have been added. Analyzed past hold time as per client request on 23/10/23.

Sample CAS502 [GLG-2023-00002-006] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS503 [GLG-2023-00002-007] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS504 [GLG-2023-00002-008] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS505 [GLG-2023-00002-009] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS506 [GLG-2023-00002-010] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for NO2 (N); NO2 (N) + NO3 (N) in Water. Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS507 [GLG-2023-00002-011] : Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAS508 [GLG-2023-00002-012] : Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Orthophosphate by Automated Analyzer. Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAS509 [GLG-2023-00002-020] : Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

AECOM CANADA LTD.

Client Project #: 60710609

Site Location: Gordon Lake

Sample CAS510 [GLG-2023-00002-001] : Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAS511 [GLG-2023-00002-002] : Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

#### **RESULTS OF CHEMICAL ANALYSES OF WATER Comments**

Sample CAS506 [GLG-2023-00002-010] NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water: Sample was originally processed within hold time. Data quality required investigation. Re-analysis was completed past recommended hold time.

**Results relate only to the items tested.**

### QUALITY ASSURANCE REPORT(CONT'D)

QA/QC	Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
	B166325	AZI	RPD [CAS502-04]	Total Suspended Solids	2023/10/24	NC		%	20
<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference &lt;= 2x RDL).</p> <p>(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.</p>									

### VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by:

Ghayasuddin Khan, M.Sc., P.Chem., QP, Scientific Specialist, Inorganics

Gita Pokhrel, Laboratory Supervisor

Sandy Yuan, M.Sc., QP, Scientific Specialist

Veronica Falk, B.Sc., P.Chem., QP, Scientific Specialist, Organics

Bureau Veritas Proprietary Software  
Logiciel Propriétaire de Bureau Veritas

Automated Statchk

Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Scott Cantwell, General Manager responsible for Alberta Environmental laboratory operations.

implied. Bureau Veritas has been retained to provide analysis of the samples provided by the Client using the testing methodology referenced in this report.

Measurement Uncertainty has not been accounted for when stating conformity to any referenced standard. Interpretation and use of the test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. When sampling is not conducted by Bureau Veritas, results apply only to the sample(s) as received. Bureau Veritas is not responsible for the accuracy or any data impacts that result from the information provided by the customer or on the clients behalf by their agent.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Bureau Veritas Calgary, 4000 - 19 St. , Calgary, AB, T2E 6P8

(2) Silica gel clean up employed.

(3) Dissolved > Total Imbalance: When applicable, Dissolved and Total results were reviewed and data quality meets acceptable levels unless otherwise noted.

(4) The CCME method requires pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the CCME holding time. Bureau Veritas endeavours to analyze samples as soon as possible after receipt.

(5) Orthophosphate > Total Phosphorus Imbalance: When applicable, Orthophosphate, Total Phosphorus and dissolved Phosphorus results were reviewed and data quality meets acceptable levels unless otherwise noted.

(6) TOC present in the sample should be considered as non-purgeable TOC.

=====  
Bureau Veritas has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per ISO/IEC 17025, signing the reports. For Service Group specific validation, please refer to the Validation Signatures page if included, otherwise available by request. For Department specific Analyst/Supervisor validation names, please refer to the Test Summary section if included, otherwise available by request. This report is authorized by Scott Cantwell, General Manager responsible for Alberta Environmental laboratory operations.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	4.7°C
Package 2	5.3°C

Version 2: Report re-issued to provide results for parameters requested on the original Chain of custody. Results for TSS on all samples have been added. Analyzed past hold time as per client request on 23/10/23.

Sample CAV399 [GLG-2023-00002-004] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAV400 [GLG-2023-00002-005] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAV401 [GLG-2023-00002-013] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAV402 [GLG-2023-00002-014] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV403 [GLG-2023-00002-015] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV404 [GLG-2023-00002-024] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV405 [GLG-2023-00002-025] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV406 [GLG-2023-00002-026] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO2 (N); NO2 (N) + NO3 (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAV407 [GLG-2023-00002-027] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Dissolved Solids (Filt. Residue). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV408 [GLG-2023-00002-028] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR). Exceedance of hold time increases the uncertainty of test results but does not necessarily imply that results are compromised.

Sample CAV409 [GLG-2023-00002-018] : Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

Sample CAV410 [GLG-2023-00002-019] : NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water completed within five days of sampling. Data is satisfactory for compliance purposes. Orthophosphate by Automated Analyzer completed within five days of sampling. Data is satisfactory for compliance purposes. Turbidity completed within five days of sampling. Data is satisfactory for compliance purposes. Sample was analyzed past method specified hold time for Total Suspended Solids (NFR).

#### RESULTS OF CHEMICAL ANALYSES OF WATER Comments

Sample CAV401 [GLG-2023-00002-013] NO<sub>2</sub> (N); NO<sub>2</sub> (N) + NO<sub>3</sub> (N) in Water: Detection limits raised due to matrix interference. Matrix spike exceeds acceptance limits due to probable matrix interference.

Sample CAV399, Elements by ICP - Dissolved: Test repeated.

Sample CAV400, Elements by ICP - Dissolved: Test repeated.

**Results relate only to the items tested.**

B166903	HE1	RPD	Total Suspended Solids	2023/10/24	0.71		%	20

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

**VALIDATION SIGNATURE PAGE**

The analytical data and all QC contained in this report were reviewed and validated by:

Ghayasuddin Khan, M.Sc., P.Chem., QP, Scientific Specialist, Inorganics

Gita Pokhrel, Laboratory Supervisor

Rahul Suryawanshi, Senior Analyst

Sandy Yuan, M.Sc., QP, Scientific Specialist

Suwan (Sze Yeung) Fock, B.Sc., Scientific Specialist
