JULY 14, 2022

Dear [ADDRESSEE]:

**Notification of Intent to Amend Type B Water Licence S20L8-002 for the Prohibition Creek Access Road**

The Government of the Northwest Territories Department of Infrastructure (GNWT-INF) is preparing for the construction of the Prohibition Creek Access Road (PCAR) between Canyon Creek and Christina Creek in the Sahtu Region of the Northwest Territories. The PCAR will replace the Mackenzie Valley Winter Road in this section with a wider all-season road. The segment of road between Christina Creek and Prohibition Creek will be constructed thereafter.

**INTRODUCTION**

The construction of the PCAR will require some new culverts to be installed at several creeks and drainages and will require repair and improvements of embankment and erosion protection around existing bridges. Construction of the PCAR will also require water for compaction of base material and dust control. GNWT-INF has received approvals from the Sahtu Land and Water Board (SLWB) to allow work in and around these creeks and drainages and to take water from the Mackenzie River; however, GNWT-INF has identified that additional approvals will be required to potentially take water from other sources. This letter describes the proposed activity that will require amendment of the Project's Type B water licence:

- Annual water withdrawal from potential creek sources

**WATER REQUIREMENTS AND POTENTIAL SOURCES**

During construction of the PCAR, water is used to compact layers of road base placed on top of embankment. GNWT-INF currently has approval to withdraw water from the Mackenzie River for this purpose. To eliminate long hauls, GNWT proposes to withdraw water from additional nearby sources between Canyon Creek and Jungle Ridge Creek which may be accessible and meet the flow requirements.

Water use may be up to 299 cubic metres per day, depending on the flow of each of the creek at the time. To protect fish and fish habitat, GNWT-INF proposes to only take 10 percent (one tenth) of the flow and only when water flows are more than 30 percent of the mean annual discharge of the creek, which is likely to be in spring, summer, and early fall.

.../2

No new access to the creeks is needed as the water truck will be parked on the road embankment. The water intake hose would have a fish screen to prevent entrapment of fish.

GNWT-INF looks forward to your ongoing interest in the PCAR project should you wish meet to discuss either of the above proposals, please contact Kelly Bourassa at [kelly\\_bourassa@gov.nt.ca](mailto:kelly_bourassa@gov.nt.ca).

Sincerely,

A handwritten signature in black ink that reads "Kelly Bourassa". The signature is written in a cursive style and is placed on a light blue rectangular background.
