RE: Enbridge L21 Project Slurry Disposal - Yellowknife

Based on information provided to KBL Environmental Ltd. (KBL) we understand that Enbridge, through their subcontractor Somerville, will be generating approximately 1,000m³ of waste soils (including HDD cuttings, HDD drilling fluid, and hydrovac slurry) from drilling that will be occurring in January and February 2021 at the above referenced project near Norman Wells, Northwest Territories.

KBL operates a soil treatment facility (Makenzie Valley Land and Water Board Licence # MV2019L1-0003) at 17 Cameron Road in Yellowknife, Northwest Territories. KBL's facility has agreed to accept the soils and can confirm that we currently have capacity to receive the anticipated volumes of soils quoted pending receipt of a completed waste profile form and analytical results. The information documented on the form includes the generator, source, type of material, and includes confirmation that soil sampling for analysis was completed in a manner to satisfy technical standards. Analytical results (from an accredited laboratory) for petroleum hydrocarbons, metals, and regulation specific analyses must accompany the Waste Profile Form. If it is determined that the required information is incomplete, or the analytical results fail to meet acceptance criteria, material will not be accepted and will remain the responsibility of the generator.

Please do not hesitate to contact us if you have any further inquiries.

Regards,

Katie Oliver
Manager, Environmental Consulting

Section B: Waste Description

Description: _____ Source: _____
 Quantity: _____ Tonne Pail Drum m³ Lab ID #s: _____

Section G: Certification

I hereby certify that to the best of my knowledge the information contained above is accurate and contains no willful or deliberate omissions. The sample for which the analytical data was provided is representative of the waste and was collected and preserved in a manner consistent with accepted technical standards. The waste described is not hazardous according to EUB or AENV regulations. If it is determined that the waste stream does not conform to this profile, KBL Environmental Services Ltd. reserves the right to re-profile the waste, reject the waste or surcharge the quoted disposal price.

Yellowknife Hydrocarbon-Contaminated Soil Treatment Facility Acceptance Requirements

The licence specific acceptance requirements for soil, water and snow, are described below:

Soil Acceptance Requirements

Prior to the acceptance of soil, two pieces of information are required by the water licence for submission to KBL:

- 1) Completion and submission of the KBL waste profile form.
- 2) Laboratory analytical results for the parameters below:

Soil Parameters
pH
Total Metals + Mercury
BTEX, F1-F4
Particle Size by Sieve (75 micron)

Soil Volume (m3)	Sample Quantity
1-50	1
51-100	2
101-1000	3
1001-2000	4
2001-4000	5

Water and Snow Acceptance Requirements

Prior to the acceptance of water and snow, two pieces of information are required by the water licence for submission to KBL:

- 1) Completion and submission of a waste profile form
- 2) Laboratory analytical results for the parameters below:

Snow / Water Parameters
pH
Flash Point
BTEX, F1-F4

Table 4: Snow & Water Sample Quantities

Snow and Water Volume (m3)	Sample Quantity
1-50	1
51-275	2
